Strength Through Innovation Since 1764

Innovation with Passion, Peace of mind & Performance

Gunnebo Industries live and breathe quality. For over 250 years we have developed and manufactured premium products of outstanding quality to industries within manufacturing, construction, oil & gas, offshore, fishing, and aquaculture worldwide.

The harsh environments of these industries result in high demands on the equipment used, and the safety and reliability of our products are essentially what have positioned us as a premium producer over the years. At Gunnebo Industries our products are developed, manufactured and tested beyond the highest standards, and we take a long-term responsibility for our products and services. We are passionate about developing products for our customers' needs that are safe and reliable, today and in the future.

We believe the key to innovation is to truly understand the customers' needs and to continuously improve our products, services and processes. Every employee at Gunnebo Industries strives to provide excellent support and service, and we take great pride in what we do.

Our expertise, knowledge, commitment and long experience is something extraordinary; we are there every step of the way to help our customers be successful in their business.

We deliver quality and innovation with passion, peace of mind and performance
– to every part of the world.

Our Vision

"Gunnebo Industries is the preferred partner in lifting and related applications for customers throughout the world. We are known for our innovative, safe and reliable products and our excellent support and service."

Our Mission

"We will always make our products readily available regardless of where in the world they are needed through a worldwide network of experienced expertise, including our sales offices, partners and distributors."

Our Core Values

Passion ● Peace of mind ● Performance

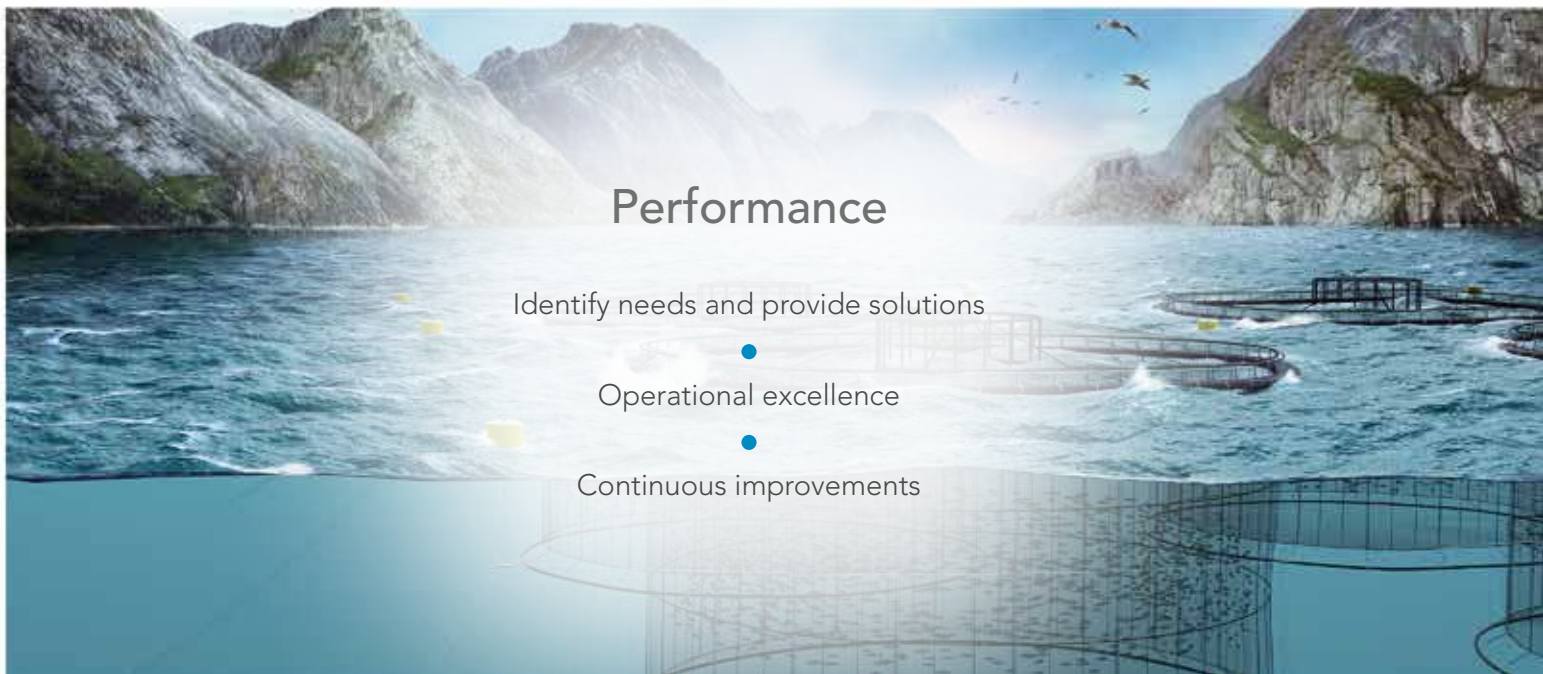

Passion

- Proactivity
- Extraordinary commitment
- Responsible and trustworthy

Peace of mind

- Extensive technical expertise
- Outstanding quality
- Long term vision

Performance

- Identify needs and provide solutions
- Operational excellence
- Continuous improvements

Company Information and Services

About our products	1:6 - 1:7
Global presence	1:8
Quality, technology & innovation	1:9
Training	1:10 - 1:11

A legacy of innovation

In 1764 Hans Hultman founded Gunnebo Industries in the shape of a hammer-smithy in Småland, Sweden. Today we are an international corporation, well known in many industries all over the world.

Gunnebo Industries continuously drives innovation through product development to create the optimal solutions for each lifting situation. Since the early 1950's we have developed products that are today's standards on the market and copied by almost all manufacturers of lifting equipment. There is however only one original - Gunnebo Industries. With the original you get the perfect fit and clever details.

Unique quality process for our chain & lifting components

Traceability code

The traceability code consists of letters and numbers that identifies exactly which plant the product was made in, the year and the batch. This gives us the ability to trace the product back through the manufacturing process, all the way back to the specific raw material.

Approved by BG/DGUV

Our products have the H32-stamp which means that they are manufactured and approved in accordance to the rules of Die Berufsgenossenschaft Handel und Warenlogistik (BGHW). This is a proof of quality and ensures that the product contributes to the safest possible working environment for both personnel and load.

Quality assurance

All forged parts and every chain link are individually proof loaded during our manufacturing process.

Manufacturer name

All our forged components are marked with "Gunnebo Sweden".

Component type, size and grade

The size and grade is clearly marked on each component, to avoid errors and ensures correct matching of chain and components.

High quality steel

Our components and chain are made only from steel from European suppliers with 100% traceability and quality assurance.

Wide range of products and applications

1

Chain & Lifting Components

Our chain and components are made from special hardened and tempered alloy steel that guarantees high strength, low weight, high wear resistance and long life. All components are uniformly marked with chain size, grade, manufacture's designation and name. Every forged component is tested to the Manufacturing Proof Force before leaving our factories in Sweden.

The GrabiQ System

Our GrabiQ Grade 10 range features integral shortening, reduced number of components and more flexible use of chain slings. This provides a modular concept for cost effective lifting solutions that covers a wide set of applications.

Lifting Points

Our wide range of lifting points allow us to provide complete solutions developed for each customer's needs, enabling improved operational efficiency for our customers. All of our Lifting Points are CE marked. Each lifting point has been proof loaded to 2.5 times the Working Load Limit and visually inspected by a licensed inspector before leaving the factory.

Shackles & Rigging Screws

Our shackles are available in a broad range of steel including acid proof stainless steel and high grade alloy steel to comply with the most stringent specifications. Several of our shackles are also Type Approved to DNV 2.7-1. The production of shackles and rigging screws takes place in our factory located outside Bergen, Norway.

Johnson Products

Johnson products – An extensive product line including crane blocks, overhaul balls, snatch blocks, swivels and wedge sockets. Stringent quality controls make our products the standard of choice in the industry. All Johnson products are manufactured in our own factory in Tulsa, Oklahoma USA.

Johnson Sheaves

We develop and manufacture sheaves for all purposes. Our sheaves are made of high-strength materials and designed to optimize performance and quality. With production facilities in USA and Europe, we serve customers on a global scale, always close, for the best possible support.

Aquaculture

Our maritime products are made for a life under water. For example, our Hot Dip Galvanized (HDG) lifting range is designed to meet the specific challenges from corrosive environments in which they will have a longer lifetime. In the long run our HDG products require less maintenance and are more cost effective.

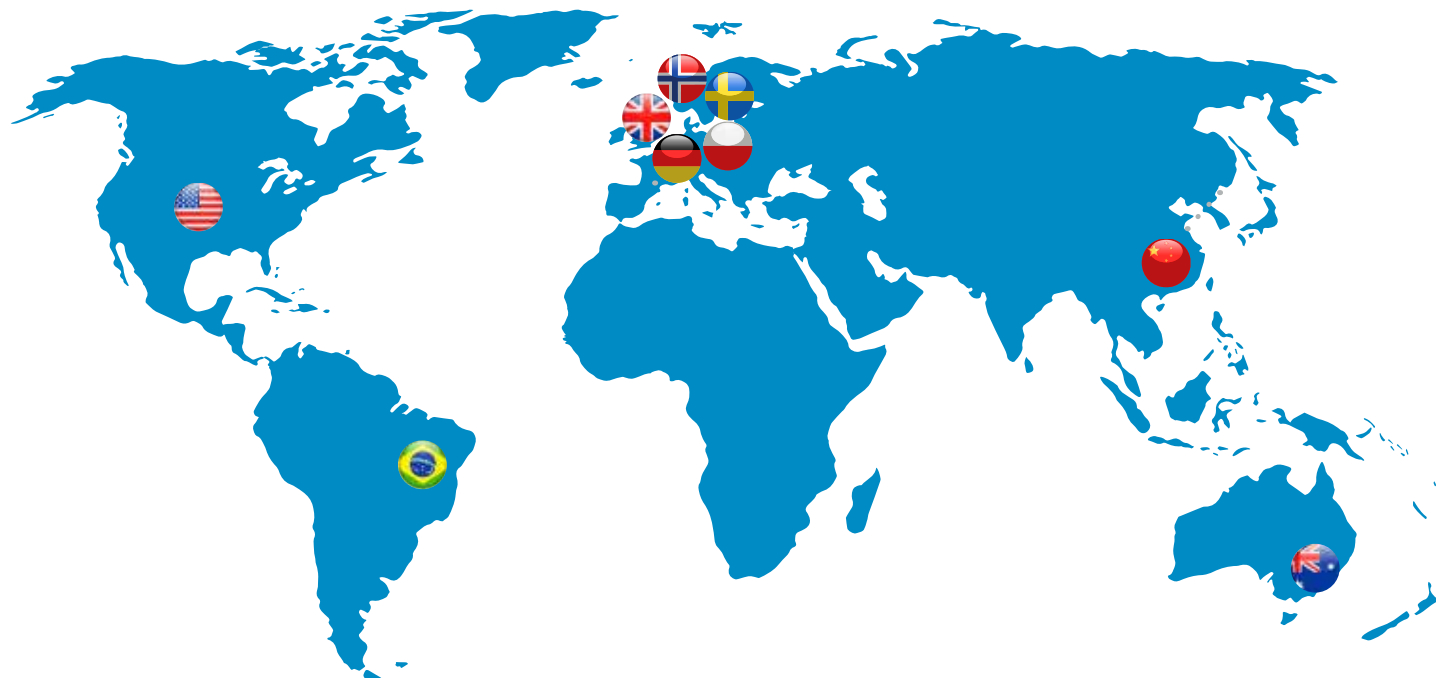

Arctic Offshore

Adverse weather and rough sea conditions, sometimes in combination with extremely low temperatures, must be considered in the design of offshore lifting sets. Our offshore range is produced from steel that gives improved impact strength at low operating temperatures, as well as reduced risk for hydrogen embrittlement.

Global presence

Sales Offices in 9 countries • Distributors in more than 50 additional countries

Four production facilities in Sweden, Norway and US • Headquarter and Central warehouse in Sweden

Quality, technology & innovation

Outstanding quality level

- Gunnebo Industries environmental and quality management system is certified according to ISO 14001:2015 and ISO 9001:2015.
- A number of different third-party product certificates including DNV type approvals for our offshore master links and hooks.
- Full traceability and individual proof-loading to 200-250% of the working load limit of all forged parts and chain links.
- Extensive testing and inspection process.

World-class manufacturing process

- Automated state-of-the-art production sites.
- Fully integrated manufacturing process with all critical processes in-house.
- Full traceability from finished product to raw material.

Technical expertise

- System design creating operational efficiency through time and weight savings, as well as increased flexibility.
- Design expertise and outstanding customer service.
- Our own R&D department.

Heritage of innovation

- Many of the products that are today's industry standard have been developed by Gunnebo Industries, with innovation since 1764.

Training

Knowledge lifts loads off your mind

We want to ensure that you have safe and correct handling of our products. In order to do so, we have developed a number of customer training programs. The courses are presented by our highly qualified staff, often at site together with customers.

We offer a range of training sessions that will increase both your knowledge of our products and how to handle them safely and correctly, as well as give you sales hints on selling in a very competitive market.

Our technical courses will not only help to create a safer working environment, but also increase the life span of our products.

After successful completion of the course, each participant will receive a Certificate, detailing the knowledge achieved.

Target groups for Gunnebo Industries courses are:

- Gunnebo Industries distributors
- Purchasing personnel
- Safety personnel
- Rigging supervisors
- Users of Rigging

Training courses

Technical training

Level 1	1 day	<ul style="list-style-type: none"> • Company information • Current relevant legislation • Lifting equipment selection • Sling configuration including the GrabiQ system • Gunnebo Industries products • Shackle program • Blocks and sheaves program
Level 2	2 days	<ul style="list-style-type: none"> • More detailed Level 1 information • Safe use of lifting equipment • Gunnebo manufacturing process • Practical handling and sling assembly • Inspection and maintenance

Sales training

	Half day	<ul style="list-style-type: none"> • Company information • Sales training • Sales promotion methods • Practical tips on technical sales
--	----------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Training locations

- Gunnebo Industries global subsidiaries
- Gunnebo Industries main distributor centres
- On-site at suitable training centres

Post course information service

All participants can also request technical advice and information from instructor after completion of the course.

Course dates and schedules

For more information and course dates, please contact us at export@gunneboindustries.com or contact any of our sales teams.

GrabiQ system for increased efficiency and reduced cost

Our GrabiQ chain sling system for coupling, shortening and lifting in grade 10 is designed to integrate multiple functions in each component.

GrabiQ – Quicker, safer and easier lifting operations

- **Intelligent design:**
Efficient and ergonomic lifts.
- **Multiple functions in each component:**
Fewer components in each sling, resulting in cost effective lifting operations.
- **Built in shortening function:**
Allows the user to instantly adjust the chain sling.
- **Grade 10:**
Lighter slings and 25 % added strength compared to grade 8.
- **High quality:**
All products are proof loaded and visually inspected.

 **GrabiQ**TM

GrabiQ components with multiple functions

Innovative designs that combines several clever functions in one component.

Midgrab - MIG

- Instant mounting, positioning, shortening on any part of the chain.

C-grab Duo - CGD

- Built in shortening function.

Master Grab - MG

- "All-in-one" compact top link
- Every chain leg can instantly be altered.
- Using the built in shortening function you can alter between a straight lift to a looped sling in a matter of seconds.

Fewer components with GrabiQ

With GrabiQ the number of components and the weight is significantly reduced:

4-leg sling with shortening function

- 1 Master link
- 2 C-Grab Duo

Total:
3 GrabiQ components

- 1 Master link with 2 Sublinks
- 8 Berglok Chain Couplers
- 4 Grab Hooks

Total:
15 components

2-leg sling with shortening function

- 1 Master Grab Duo

Total:
1 GrabiQ component

- 1 Master link
- 4 Berglok Chain Couplers
- 2 Grab Hooks

Total:
7 components

Less is more with FlexiLeg™

Thanks to the unique features of our GrabiQ product range we can offer solutions that increase the flexibility in lifting operations even further. Our FlexiLeg solution allows you to have an instant leg change onsite. With one single master link in combination with five Flexi-legs we offer a solution that replaces four complete traditional slings, a total of ten legs. In addition to this Flexi-leg also gives you the opportunity to modify the chain sling to different lifting operations, whenever and wherever it is needed.

GrabiQ FlexiLeg – a total of 5 legs replaces the total of 10 legs with the old traditional system.

The benefits of instant leg-change

- It enables the user to change slings, leg by leg.
- It makes the sling lighter and easier to work with.
- Sling legs that are not being used can easily be removed, thereby increasing safety at the work site.
- The quantity of sling material is greatly reduced, providing cost savings.
- The chain sling can be rebuilt on site, thus increasing efficiency.

Related products

QuickPin for safe exchange of sling legs

- Fits all C-components (CL, CLD, CG, CGD)
- Has instant close/open function, no tools needed
- Easy to retro-fit
- Made of stainless steel for long product life span

FlexiTag for every GrabiQ sling

- Specially designed for FlexiLeg
- Fits all other GrabiQ slings
- WLL and chain size pre-stamped for 1 - 4 legs
- Leg angle 45/60 degree shown in contour
- Made of stainless steel for use in all weather conditions

Midgrab chain shortener MIG

Product features

- Instant mounting and positioning on any part of the chain.
- Shortening in either chain direction; up-down.
- Designed to prevent inadvertent chain disengagement.
- Can be set idle on the chain leg when shortening is not required.
- LC version offers secure mounting with locking set on any desired part of the chain with one chain direction open for shortening.
- CC version offers close-open function in both chain directions for safe retention of the chain.

Locking devices for Midgrab MIG

Note! The MIG should be used with at least one locking device.

L - fixed locking set

For fixed mounting

Code:

Identification of our Master Links

To provide good readability and traceability our master links have the following marking:

Product type

- **M** - represents single type master link.
- **MT** - represents master link assembly.
- **OS** - is an abbreviation for offshore. All Arctic offshore master links are marked with OS and complies with DNV 2.7-1.

Traceability code

- The traceability code is unique for the production batch and normally consists of a letter and a number; for example A2. The traceability code makes it possible to trace and track the product through the whole production process back to the raw material used for the actual product.

Size designation

- The size is linked to the WLL as well as to compatible products, like attachment links and other components.
- Trade size.
- The size expressed in inch.

Gunnebo Sweden

- To clearly highlight the Gunnebo Industries brand, our master links are marked with *Gunnebo Sweden*.

Meets the standards

- The markings fulfills the requirements of EN 1677-4, ASTM A952/A952M-02, ASME B30.26, AS 3775.2 and DNV 2.7-1.

Approved by BG/DGUV

- **H32** – represents Gunnebo Industries' manufacturing ID. The ID also represents a 3rd part audit by BGHW in Germany.

** Dimension L and E not acc. to EN 1677-4.

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02, ASME B30.26, AS 3775:2014 and AS 3776:2015.

Master Link MF

For 1-, 2-, 3- and 4-leg slings. Designed for use with CL, CLD, CG and CGD. 3- and 4 leg chain slings require CLD / CGD.

B14704	MGD-16-10	14.0	310	175	120	35	7.9

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

Coupling Link G

For use with master link and eye hook.

Art. no.	Code	WLL tonnes*	L	B	F	A	C	Weight kg
Z100821	G-6-10	1.5	45	15	7	8	16	0.1
Z101358	G-7-10	2.0	56	18	9	11	22	0.2
Z100822	G-8-10	2.6	56	18	9	11	22	0.2
Z100823	G-10-10	4.0	68	25	12	13	26	0.3
Z100824	G-13-10	6.8	89	29	15	17	33	0.7
Z100825	G-16-10	10.3	106	36	19	20	40	1.4
Z101119	G-20-10	16.0	125	43	23	26	44	2.2
Z101339	G-22-10	20.0	152	50	26	28	59	3.6
Z101365	G-26-10	27.3	161	58	32	34	61	5.7
Z101666	G-32-10	40.0	200	70	38	40	77	9.5

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

C-Grab CG

For use with master link, eye hooks and choke.

Art. no.	Code	WLL tonnes*	L	B	E	D	Weight kg
B14730	CG-6-10	1.5	80	11	24	19	0.3
B14731	CG-8-10	2.6	107	12	32	24	0.7
B14732	CG-10-10	4.0	134	15	40	29	1.5
B14733	CG-13-10	6.8	172	18	52	38	3.2
B14734	CG-16-10	10.3	215	22	64	47	6.1

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

C-Grab Duo CGD

For use with master links.

Art. no.	Code	WLL tonnes*	L	B	E	D	Weight kg
B14720	CGD-6-10	2.1	79	11	24	20	0.6
B14721	CGD-8-10	3.5	107	12	32	29	1.1
B14722	CGD-10-10	5.6	134	15	40	37	2.2
B14723	CGD-13-10	9.5	173	19	48	48	5.4
B14724	CGD-16-10	14.0	215	22	64	57	9.1

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

C-Lok CL

For use with master links, eye hooks and choke.

Art. no.	Code	WLL tonnes*	L	B	E	D	Weight kg
B14750	CL-6-10	1.5	43	11	24	18	0.2
B14751	CL-8-10	2.6	58	12	32	24	0.5
B14752	CL-10-10	4.0	74	15	40	29	1.0
B14753	CL-13-10	6.8	94	18	52	38	2.0
B14754	CL-16-10	10.3	119	22	64	48	3.8

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

C-Lok Duo CLD

For use with master links.

Art. no.	Code	WLL tonnes*	L	B	E	D	Weight kg
B14740	CLD-6-10	2.1	43	11	24	22	0.4
B14741	CLD-8-10	3.5	58	12	32	29	0.6
B14742	CLD-10-10	5.6	74	15	40	37	1.2
B14743	CLD-13-10	9.5	94	18	52	46	3.1
B14744	CLD-16-10	14.0	119	25	64	57	5.5

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

GrabiQ Chain KLA, Grade 10 (200)

Short link lifting chain

Heat treatment

Hardened and tempered.
Note! For chain grade 10 (200) the maximum in service temperature is 200°C.

Surface treatment

Painted blue

Fulfills the requirements in:

ASTM A973/A973M-07(2012)
EN 818+2:2008 (WLL+25%,
reduced temperature range)

Art. no. Box	Code	WLL tonnes	d nom.	P	w1	Weight kg/m	MPF kN	Breaking force kN

2

GrabiQ Chain KLA, Grade 10 (400)

Short link lifting chain

Heat treatment

Hardened and tempered.
Note! For chain grade 10 (400) the maximum in service temperature is 400°C.

Surface treatment

Painted blue

Fulfills the requirements in:

EN 818-2:2008 (WLL+25%,
material dimension Ø +10%)

Note: This chain is marked with "8+" in addition to the marking required by the machine directive

Art. no. Box	Code	WLL ton- nes	d nom.	P	w1	Weight kg/m	MPF kN	Breaking force kN

Z802310 - 1 x 100 m	KLA 16-10 (400)	10.0	17.3	48	23.0	6.7	251	402

For larger sizes, see GrabiQ Grade 10 (200) or Classic Grade 8.

Marking and traceability of Gunnebo Industries chain

Grab Hook GG

Clevis shortening hook. No reduction of working load limit, thanks to supporting cradle lugs on either side of hook to prevent chain link deformation.

Art. no.	Code	WLL tonnes*	L	B	Weight kg
Z101844	GG-6-10	1.5	54	8	0.2
Z100845	GG-7-10	2.0	57	10	0.3
B14771	GG-8-10	2.6	57	10	0.4
B14772	GG-10-10	4.0	76	12	0.9
B14773	GG-13-10	6.8	97	16	1.8
B14774	GG-16-10	10.3	114	20	3.1
Z101152	GG-20-10	16.0	147	26	7.0

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

Grab Hook GG with Locking Pin

Clevis shortening hook with locking pin for extra safety. No reduction of working load limit, thanks to supporting cradle lugs on either side of hook to prevent chain link deformation.

Art. no.	Code	WLL tonnes*	L	B	Weight kg
B14971	GG-8-10 LP	2.6	57	10	0.4
B14972	GG-10-10 LP	4.0	77	12	0.9
B14973	GG-13-10 LP	6.8	97	16	1.9
B14974	GG-16-10 LP	10.3	114	20	3.2

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

Grab Hook OG

Eye shortening hook. No reduction of working load limit, thanks to supporting lugs on either side of hook to prevent chain link deformation.

Art. no.	Code	WLL tonnes*	L	B	E	F	Weight kg
Z101296	OG-7/8-10	2.6	65	10	17	10	0.3
Z101297	OG-10-10	4.0	85	12	20	12	0.7
Z101298	OG-13-10	6.8	104	16	26	16	1.6
Z101299	OG-16-10	10.3	131	20	32	19	2.8
Z101300	OG-20-10	16.0	167	26	41	23	6.1
Z101301	OG-22-10	20.0	187	26	46	26	7.75

Z101303	OG-32-10	40.0	229	40	50	27	20.7

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

Safety Hook GBK

Safety hook with clevis connector and grab latch.

Art. no.	Code	WLL tonnes*	L	B	G	H	Weight kg
Z100758	GBK-6-10	1.5	87	26	15	17	0.4
Z100849	GBK-7-10	2.0	114	36	20	22	0.5
Z100759	GBK-8-10	2.6	119	36	20	22	0.8
Z100760	GBK-10-10	4.0	150	47	22	29	1.4
Z100761	GBK-13-10	6.8	172	53	29	38	2.7
Z100762	GBK-16-10	10.3	208	68	30	45	4.4

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

Safety Hook BKG

Safety hook with clevis connector and standard latch.

Art. no.	Code	WLL tonnes*	L	B	G	H	Weight kg
Z101110	BKG-6-10	1.5	91	29	15	21	0.5
Z101098	BKG-7-10	2.0	120	37	17	22	0.5
Z101100	BKG-8-10	2.6	121	37	17	26	0.9
Z101026	BKG-10-10	4.0	144	45	21	31	1.5
Z101034	BKG-13-10	6.8	180	55	30	40	3.0
Z101042	BKG-16-10	10.3	219	62	37	50	5.5
Z101091	BKG-20-10	16.0	240	68	46	64	9.6

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

Safety Hook BKGC

Safety hook with clevis connector for skip loaders.

Art. no.	Code	WLL tonnes*	L	B	G	H	Weight kg
Z1002401	BKGC-13-10	6.8	164	55	27	43	3.2

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

Sling Hook GKC

Sling hook with clevis connector for skip loaders.

Art. no.	Code	WLL tonnes*	L	B	G	H	Weight kg
Z7006461	GKC-13-10	6.8	188	60	27	43	2.5

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

Safety Hook OBK

Safety hook with eye connector and grip latch.

Art. no.	Code	WLL tonnes*	A	L	B	E	F	G	H	Weight kg
Z101048	OBK-6-10	1.5	12	103	26	22	9	15	17	0.4
Z101143	OBK-7/8-10	2.6	14	139	37	28	10	20	22	0.8
Z101145	OBK-10-10	4.0	16	170	47	34	13	22	29	1.3
Z101147	OBK-13-10	6.8	21	206	53	44	15	29	38	2.6
Z101141	OBK-16-10	10.3	26	251	68	56	19	29	45	4.4
Z101240	OBK-18/20-10	16.0	28	293	74	60	22	44	56	8.3

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

BK Safety Hook The Original

Gunnebo Industries continuously works with product development and innovation to create the optimal solutions for each lifting situation. Since the early 1950's we have developed products that have become today's standards on the market. There is however only one original - Gunnebo Industries. With the original you get the perfect fit and smart details.

Back in 1965 Gunnebo Industries developed the BK hook. The mission was to increase the workplace safety of the construction industry. Today this popular and well known hook is the foundation of the innovative and much appreciated BK product family.

Clear markings

- Country of origin.
- Traceability codes.
- Model, size and grade.

Increased flexibility

- The eye design enables connection to not only G-links, but also C-links and Berglok.
- The design makes the BK hook suitable for steel wire ropes.

Flat section

- For attachment to other GrabiQ or wire components.

Heavy duty rivet

- Recessed rivet for a slim design.
- Decreases the risk of snagging.
- Ideal in narrow spaces.

Latch rotation stop

- Protects the trigger mechanism from damage.

Quality is top priority

- Fatigue tested.
- Forged alloy steel.
- Hardened and tempered.
- Every hook is individually proof-loaded at 2,5 x WLL.
- Full traceability back to the raw material.

Precision manufacturing

- Perfect fit between the parts.
- Increases safety during operation.

Fluorescent color

- For high visibility in the field.

Replaceable trigger set

- Quick and easy assembly.
- Available as a complete spare part kit.

Recessed trigger

- To avoid the trigger from snagging or being damaged, it has been recessed into the body of the hook.
- Helps to prevent the latch from accidentally opening.

Safety Hook BK

The "original" safety hook with eye connector.

Art. no.	Code	WLL tonnes*	A	L	B	E	F	G	H	Weight kg
Z101108	BK-6-10	1.5	12	109	29	22	10	15	21	0.5
Z101097	BK-7/8-10	2.6	14	138	37	28	11	17	26	0.9
Z101024	BK-10-10	4.0	16	168	45	34	13	21	31	1.5
Z101032	BK-13-10	6.8	20	207	55	44	16	30	40	3.0
Z101040	BK-16-10	10.3	26	254	62	56	20	37	50	5.5
Z101089	BK-18/20-10	16.0	30	289	68	60	22	44	64	9.0
Z101325	BK-22-10	20.0	32	320	80	70	24	50	64	11.3
Z101326	BK-26-10	27.3	35	342	100	80	25	54	68	16.5

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

For larger sizes, see Classic Grade 8.

Safety Hook BKD

Double latch BK-hook with recessed trigger. Should the first hook latch accidentally open, either through direct impact or excessive wear on the trigger, the extra latch is there to retain the load safely. The secondary latch is designed to be easily operated and will not cause inconvenience for the operator.

Art. no.	Code	WLL tonnes*	A	L	B	E	F	G	H	Weight kg
Z101154	BKD-13-10	6.8	20	207	44	44	16	30	40	3.2
Z101155	BKD-16-10	10.3	26	254	48	56	20	37	50	5.8
Z101156	BKD-18/20-10	16.0	30	289	52	60	22	46	62	9.1

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

Double latch

Should the hook latch accidentally open, either through direct impact or excessive wear on the trigger, the extra latch is there to retain the load safely. The extra latch is designed to be easily operated.

Shank Safety Hook BKT

Safety hook with shank for customized machines.

Art. no.	Code	WLL tonnes*	L	B	L1	D	dmin	G	H	Weight kg
Z1011120	BKT-6-10	1.5	90	29	36	20	11	15	21	0.5
Z1011020	BKT-7/8-10	2.6	111	37	47	24	13	17	26	0.9
Z1010690	BKT-10-10	4.0	133	45	51	29	16	21	31	1.6
Z1010710	BKT-13-10	6.8	160	55	77	34	20	30	39	3.0

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

d min = the smallest permitted shank dimension after machining.

Note! After machining of the shank, proof loading must be carried out.

Swivel Safety Hook BKL

Safety hook with swivel for improved positioning of the hook before the load is lifted (360° rotation).

Art. no.	Code	WLL tonnes*	L	B	C	E	A	G	H	Weight kg
Z101114	BKL-6-10	1.5	149	29	23	33	11	15	21	0.7
Z101104	BKL-7/8-10	2.6	183	37	27	38	12	17	26	1.2
Z101028	BKL-10-10	4.0	218	45	37	44	15	21	31	2.0
Z101036	BKL-13-10	6.8	282	55	49	48	19	30	40	4.0
Z101044	BKL-16-10	10.3	341	62	65	61	25	37	50	7.2
Z101093	BKL-18/20-10	16.0	368	68	70	72	31	44	62	11.4

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

Swivel Safety Hook BKLK

Safety hook with ball-bearing for 360° rotation under full WLL.

Art. no.	Code	WLL tonnes*	L	B	C	E	A	G	H	Weight kg
Z101116	BKLK-6-10	1.5	149	29	24	33	11	15	21	0.7
Z101106	BKLK-7/8-10	2.6	183	37	27	38	12	17	26	1.2
Z101030	BKLK-10-10	4.0	218	45	35	44	15	21	31	2.0
Z101038	BKLK-13-10	6.8	280	55	45	48	19	30	40	4.0
Z101046	BKLK-16-10	10.3	339	62	62	61	25	37	50	7.3
Z101095	BKLK-18/20-10	16.0	368	68	60	72	31	44	62	11.5
Z101294	BKLK-22-10	20.0	436	79	80	80	35	50	62	16.8
Z101295	BKLK-26-10	27.3	486	100	110	102	45	54	68	26.0

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

For larger sizes, see Classic Grade 8.

Swivel Safety Hook with Griplatch LBK

Safety hook with griplatch and swivel for improved positioning of the hook before the load is lifted (360° rotation).

Art. no.	Code	WLL tonnes*	L	B	C	E	A	G	H	Weight kg
Z100978	LBK-7/8-10	2.6	177	37	27	38	12	20	22	1.1
Z100960	LBK-10-10	4.0	214	47	37	44	15	22	29	1.8
Z100993	LBK-13-10	6.8	262	53	45	48	19	29	38	3.5
Z100995	LBK-16-10	10.3	324	68	66	61	25	30	45	5.9

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

Swivel Safety Hook with Griplatch LKBK

Safety hook with griplatch and ball-bearing for 360° rotation under full WLL.

Art. no.	Code	WLL tonnes*	L	B	C	E	A	G	H	Weight kg
Z100980	LKBK-7/8-10	2.6	176	37	27	38	12	20	22	1.1
Z100962	LKBK-10-10	4.0	213	47	35	44	15	22	29	1.9
Z100997	LKBK-13-10	6.8	261	53	43	48	19	29	38	3.6
Z100999	LKBK-16-10	10.3	323	68	61	61	25	30	45	6.2

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

Sling Hook EGK

Sling hook with clevis connector.

Art. no.	Code	WLL tonnes*	L	B	G	H	Weight kg
Z100915	EGK-6-10	1.5	86	29	17	20	0.4
Z100918	EGK-7-10	2.0	95	32	17	22	0.5
Z100938	EGK-8-10	2.6	95	32	17	23	0.5
Z100942	EGK-10-10	4.0	121	41	23	31	1.0
Z100946	EGK-13-10	6.8	145	49	28	38	2.0
Z100950	EGK-16-10	10.3	170	61	36	46	3.8
Z101138	EGK-20-10	16.0	209	71	42	60	7.3

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

Sling Hook EGKN

Sling hook with latch.

Art. no.	Code	WLL tonnes*	L	B	G	H	Weight kg
B14460	EGKN-6-10	1.5	86	25	17	20	0.4
Z100843	EGKN-7-10	2.0	95	27	17	23	0.5
B14461	EGKN-8-10	2.6	95	28	17	23	0.5
B14462	EGKN-10-10	4.0	121	35	23	31	1.1
B14463	EGKN-13-10	6.8	145	42	28	38	2.2
B14464	EGKN-16-10	10.3	170	53	36	46	4.0
Z101127	EGKN-20-10	16.0	209	65	42	60	7.6

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

Sling Hook EK

Sling hook with eye connector.

Art. no.	Code	WLL tonnes*	L	B	E	F	G	H	Weight kg
Z101162	EK- 6-10	1.5	93	29	23	10	17	20	0.4
Z101164	EK- 7/8-10	2.6	108	32	28	12	17	23	0.5
Z101166	EK-10-10	4.0	134	41	34	14	23	30	0.9
Z101168	EK-13-10	6.8	166	49	44	18	28	38	2.0
Z101170	EK-16-10	10.3	203	61	56	22	36	47	3.3
Z101306	EK-20-10	16.0	229	71	61	26	42	60	6.2
Z101307	EK-22-10	20.0	267	82	64	31	43	67	8.5
Z101308	EK-26-10	27.3	301	95	66	32	51	75	12.1
Z101309	EK-32-10	40.0	353	105	90	38	61	98	24.6

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

Sling Hook EKN

Sling hook with latch.

Art. no.	Code	WLL tonnes*	L	B	E	F	G	H	Weight kg
Z101128	EKN- 6-10	1.5	93	25	23	10	17	20	0.4
Z101130	EKN- 7/8-10	2.6	108	26	28	12	17	23	0.6
Z101132	EKN-10-10	4.0	134	37	34	14	23	30	1.0
Z101134	EKN-13-10	6.8	166	42	44	18	28	38	2.1
Z101136	EKN-16-10	10.3	203	53	56	22	36	47	4.0
Z101327	EKN-20-10	16.0	229	60	61	26	42	60	6.4
Z101328	EKN-22-10	20.0	267	73	64	31	43	67	8.9
Z101329	EKN-26-10	27.3	301	82	66	32	51	75	13.0
Z101330	EKN-32-10	40.0	353	96	90	38	61	98	25.0

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

Foundry Hook OKE

Art. no.	Code	WLL tonnes*	L	B	E	F	G	H	Weight kg
Z100853	OKE-7/8-10	2.6	124	63	28	12	21	26	0.8
Z100854	OKE-10-10	4.0	151	76	34	15	26	30	1.4
Z100855	OKE-13-10	6.8	184	90	44	19	33	39	2.8
Z100898	OKE-16-10	10.3	218	102	56	23	40	46	4.9
Z101340	OKE-20-10	16.0	247	114	60	27	46	60	7.2
Z101341	OKE-22-10	20.0	275	120	64	31	60	70	11.3
Z101342	OKE-26-10	27.3	300	113	70	35	64	77	16.0

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

For larger sizes, see Classic Grade 8.

Swivel Latch Hook LKN

Sling hook with swivel for improved positioning of the hook before the load is lifted (360° rotation).

Art. no.	Code	WLL tonnes*	For chain dim.	L	B	C	E	A	G	H	Weight kg
Z101345	LKN-7/8-10	2.6	7, 8	155	28	28	38	12	18	24	0.8
Z101346	LKN-10-10	4.0	10	192	35	37	44	15	23	31	1.5
Z101347	LKN-13-10	6.8	13	238	40	47	48	19	28	38	3.1
Z101348	LKN-16-10	10.3	16	295	53	65	61	25	34	43	5.3

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

Swivel Latch Hook LKNK

Swivel latch hook with ball bearing for 360° rotation under full WLL.

Art. no.	Code	WLL tonnes*	For chain dim.	L	B	C	E	A	G	H	Weight kg
Z101349	LKNK-7/8-10	2.6	7, 8	154	28	28	38	12	18	24	0.9
Z101350	LKNK-10-10	4.0	10	191	35	35	44	15	23	31	1.6
Z101351	LKNK-13-10	6.8	13	236	40	45	48	19	28	38	3.3
Z101352	LKNK-16-10	10.3	16	293	53	62	61	25	34	43	5.6
Z101354	LKNK-22-10	20.0	22	400	74	80	80	35	43	67	15.1

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

Clevis Swivel Hook LKNG

For direct connection to cranes or similar applications.

Art. no.	Code	WLL tonnes*	For chain dim.	L	B	C	A	G	H	K	Weight kg
Z101353	LKNG-16-10	10.3	16	258	53	30	28	34	43	27	5.7

Fulfills requirements in: EN 1677:2008 (WLL +25%), ASTM A952/A952M-02 and AS 3776:2015.

Roundsling Hook RH

The RH-hook is the perfect load connection solution, combining the advantages of both soft lifting slings and grade 100 components. It can be inserted into a softsling and is quicker and safer to use than the commonly used shackle. The RH-hook is a connector as well as a hook, which gives the user increased flexibility, safer use and increased durability of the soft slings.

The RH-hook comes with a blocking pin, but thanks to the narrow opening it may be used without blocking pin.

2

Tested according to EN 1677-2

Art. no.	Code	WLL tonnes*	B	E	G	L	H	M	Weight kg
B14490	RH-1-10	1	24	35	16.6	84	19	8	0.5
B14491	RH-2-10	2	28	40	17	96	22	10	0.7
B14492	RH-3-10	3	33	47	24	117	30	12	1.3
B14493	RH-5-10	5	43	73	27	155	36	16.5	3.2

The roundsling hooks are color coded in order to match the corresponding sizes of roundslings marked according to EN 1492: Red=5T, Yellow=3T, Green=2T and Violet=1T.

Container Hook CH

Made for lifting containers in their lower fittings.

Art. no.	Code	WLL tonnes*	A	L	E	B	H	G	Weight kg

Offshore Components

GUNNEBO
Industries

Arctic Offshore

Innovation and quality with a purpose

We have developed products to meet the stringent requirements of the offshore oil & gas industry for many years. The working conditions are tough and products have to be able to sustain extreme conditions. Our double latch hook, BKD, was developed with the aerospace industry as a role model; if one system fails another one is ready to save the situation. The extra latch on the BKD will retain the load in case an unintended opening of the first latch should occur.

Our lifting systems have been valued for their long durability and quality. Regardless of the environmental conditions, our systems have provided lifting operations with high safety. Our quality systems give us the tools to work with continuous improvements and we will always put our great efforts into our mission to create the best available products in the market. Our quality is there with a purpose.

DNV 2.7-1 certificate

We are type-approved by DNV to manufacture master links and shackles in accordance with DNV 2.7.1 specification. The approval verifies that Gunnebo Industries has a high consistent level of production stability in the entire process, from raw material to the finished product.

-40°C

Arctic Offshore Master Links

Type approved to DNV 2.7-1

Adverse weather and rough sea conditions - sometimes in combination with extremely low temperatures - must be included in the design and safety factor of container lifting sets. The heat treatment of the components must ensure proper ductility and strength to better handle potential dynamic forces which may be imposed when the container is lifted from the deck of a vessel.

The lifting sets and its included components must be specially designed for the purpose to lift offshore containers. One of the main differences compared to the onshore standard or specification, is that it allows for the dynamic forces at sea by adding an extra enhancement factor to increase the level of safety. Another difference is that the requirements and testing of materials that will be used in cold environments, are more extensive.

Offshore HDG Safety Hook

- Longer lifetime and less maintenance in corrosive environments
- Type approved to DNVGL-ST-0378 and DNVGL-ST-0377

Offshore HDG Safety hook is a unique DNV type approved offshore safety hook with dual surface treatment. The dual surface treatment optimizes corrosion protection through Hot Dip Galvanization (HDG), and gives high visibility in the field with its fluorescent powder coating.

It has all the benefits that our original BK Safety hook has, but is designed to meet the specific challenges in offshore environments by being manufactured to exacting demands and with preventive actions taken to avoid hydrogen embrittlement.

Fulfills requirements in: DNVGL-ST-0377:2016, DNVGL-ST-0378:2016, NORSOK R-002:2017, EN 1677:2008 (WLL+25%), ASTM A952/A952M-02, AS3776:2015 and AS 3775:2014.

Double latch

Due to the motion of the sea when loading and unloading offshore, direct impact on the hook could cause the latch to unintentionally open when not being under load, risking the load to unhitch. The double latch safety hook has an extra latch retaining the load in this case.

Increased safety in heavy lifting operations

The WRIN STR Handle is a safety handle that provides additional safety to the Gunnebo Industries' BK safety hook family. With the WRIN STR Handle the operator opens and closes the safety hook without placing any hands inside the hook, resulting in a reduced risk of personal injury on worksites. The handle is easily mounted to the safety hook, without compromising the integrity of design and capabilities of the hook.

2

Improved workplace safety

- With the WRIN STR Handle there is no need to place a hand inside the safety hook, resulting in a reduced risk of personal injury on worksites.

Suitable to any safety hook within the BK family

- The WRIN STR Handle is easily mounted to any safety hook within the BK family.
- For sling shops the WRIN STR Handle is the perfect complement to the BK safety hooks, reducing the need for a large assortment of different safety hooks.
- If the handle is fully operable, it can be mounted and reused on a new hook if the existing hook is worn out.

Unique design

- The handle will keep the integrity of the hook's design and capabilities uncompromised.
- The handle is clamped to the hook and fixed by the hook's trigger pin.
- Hole for attaching a lead line for easy retrieval.
- Made of quality stainless steel according to AISI 316.

WRIN STR Handle

Suitable to any safety hook within the Gunnebo Industries BK family.

Classic Components

GUNNEBO
Industries

The SK-system with endless possibilities

A range of specialized components for safe and easy assembly to chain, steel wire rope, webbing and roundsling, designed to solve your below-the-hook problems.

The polyester sling system provides:

- Universal coupling of components to chain, wire and synthetic slings.
- Quick and simple assembly - only a hammer needed.
- Easy assembly - standardized dimensions within each size range effectively eliminates the incorrect assembly of components with different safe working loads.
- Heavy hoisting with strong yet lightweight equipment, all components are manufactured from alloy steel for use with Grade 8 chain.

2

SKA - pin & collar

The SKA set, containing pin and collar, can be used to connect all products in the SK-range. This creates a multitude of available combinations, each adaptable to the unique lifting situation.

The SKA-set gives you flexibility - it can be disassembled and put in new combinations, to provide solutions for a versatile lifting environment.

SKLI/SKLU

Electrically insulated, lubricated, sealed roller bearing swivel. Fully rotational even at maximum load. Tested to resist 1000 V. Suitable for protection of overhead cranes during welding operations on suspended loads.

By using the SKLI/SKLU with the SK-system you get a versatile solution that will fit almost any situation.

Roller-Bearing Swivel SKLI/SKLU

Electrically insulated, lubricated, sealed roller bearing swivel. Fully rotational even at maximum load. Tested to resist 1000 V. Suitable for protection of overhead cranes during welding operations on suspended loads.

The Gunnebo Industries SKLI is equipped with a heavy duty roller bearing, enabling high durability and safe use also under severe load. It also has heavy duty nylon insulation inside to decrease friction when in use. The SKLI is compatible with the entire Gunnebo Industries SK-range for versatile use.

Universal weld-on hook UKN

The original excavator hook

Excavators are often used for material handling and lifting as they are frequently available on most construction sites. However, rigging gear is often incorrectly attached either to the teeth of the bucket or directly on the excavator arm, which is a dangerous practice that can lead to accidents.

Back in 1975 Gunnebo Industries developed the UKN hook, a solution that transformed the excavator into a lifting crane. The UKN hook has been fitted to excavators, and other applications, for over 40 years, either as an aftermarket product or directly by the manufacturer. Today the UKN is the hook of choice for leading international excavator manufacturers.

Quality is top priority

- Forged alloy steel
- Hardened and tempered

100% Proof-loaded

- Every hook is individually proof-loaded at 3 x WLL.

High durability

- Forged
- Rated with a 5:1 safety factor

Clear markings

- Country of origin
- Traceability code
- Model and size

Prepared for welding

- Base plate prepared for welding

Heavy duty latch

- Latch with handles for easy opening
- Hardened and tempered

Pin & spring

- Spring protection
- Hardened and tempered hinge pin
- Stainless steel spring

**This product comes with a straight pin without recession.

Hot Dip Galvanized lifting range Grade 8

The HDG lifting range is designed to meet the specific challenges from corrosive environments in which they will have a longer lifetime. They require less maintenance than standard products, which means that the HDG products are more cost effective in the long run.

A longer life span

The HDG coating prolongs the life time for equipment in corrosive environments significantly. Not just in coastal and maritime areas but also in industrial plants and buildings with high humidity.

Protective coating with high impact and wear resistance

The HDG coating forms a flexible metallurgical bond with the steel, which gives outstanding resistance to mechanical damage during transport and service. The coating also provides an automatic protection to small areas of exposed steel, which means that minor damages need no touch-up.

Easy inspections and lower maintenance costs

Our HDG lifting components are easily visually inspected; if the coating appears sound and continuous, then it is. Simple and quick means improved productivity.

We are a provider of Peace of mind

Production and galvanizing of products that are sensitive for hydrogen embrittlement requires an in-depth material- and process knowledge.

Each element within the manufacturing process is stringently controlled with our in-house quality systems; this also applies to our galvanizing and heat treating procedures which are critical factors in the product performance. Our products are manufactured to exact demands and with preventive actions taken to avoid hydrogen embrittlement in the material.

Technical information

Standards:	Quality assurance:	What is hot dip galvanizing (HDG)?:

C - Close/open function

L - Permanent locking function

Technical information

The following information aims to give advice and explain the most common questions in order to ensure safe and proper use of lifting equipment.

It is of the utmost importance that this information is known to the user, and in accordance with the Machinery Directive 2006/42/EC this information must be delivered to the customer.

Extreme environments

The in-service temperature effects the WLL as follows:

Temperature (°C)	Reduction of WLL			
	Grade 10 chain (400)	Grade 10 chain (200)	Grade 10 components	Grade 8 chain & components
-40 to +200 °C	0 %	0 %	0 %	0 %
+200 to +300 °C	10 %	Not allowed	10 %	10 %
+300 to +400 °C	25 %	Not allowed	25 %	25 %

Upon return to normal temperature, the sling reverts to its full capacity within the above temperature range. Chain slings should not be used above or below these temperatures.

Note! A chain sling with Grade 10 (200) chain must not be used in temperatures above 200 °C.

- Chain and components must not be used in alkaline (>pH10) or acidic conditions (<pH6).
- Comprehensive and regular examination must be carried out when used in severe or corrosive inducing environments.
- In uncertain situations consult your Gunnebo Industries dealer.

Surface treatment

Note! Hot-dip galvanizing or plating is not allowed outside the control of the manufacturer.

Protect yourself and others

- Before each use the chain sling should be checked for obvious damage or deterioration.
- Know the weight of the load, the center of gravity and ensure it is ready to move and no obstacles will obstruct the lift.
- Check the conformity of the load with the WLL of the ID tag for the specific working configuration. Never use a sling without a legible valid ID tag!
- Prepare the landing site.
- Never overload a sling and avoid shock loading.
- Never use an improper sling configuration.
- Never use a worn out or damaged sling.
- Never ride on the load.
- Never walk or stand under a suspended load.
- Take into consideration that the load may swing or rotate.
- Watch your feet and fingers while loading/unloading.
- Always ensure that your back is clear.

General advice

- Ensure that the sling is precisely as ordered.
- Ensure that the manufacturers certificate is in order.
- Ensure that the ID-tag corresponds to the information on the certificate (the following ID tag information is compulsory: WLL, number of chain legs, nominal size (mm) individual ID-mark, manufacturer, CE-marking and year of manufacturing).
- Ensure that all details of the chain sling are recorded.
- Ensure that the staff using the chain sling has received the appropriate information and training.

Asymmetrical loading conditions

For unequally loaded chain legs we recommend that the WLL are determined as follows:

- 2-leg slings calculated as the corresponding 1-leg sling
- 3 and 4-leg slings calculated as the corresponding 1-leg sling. (If it is certain that 2-legs are equally carrying the major part of the load, it can be calculated as the corresponding 2-leg sling.

Safe use

A chain sling is usually attached to the load and the crane by means of terminal fittings such as hooks, links etc.

When frequently using a sling to it's maximum load, we recommend increasing the sling size by one dimension.

Chain should be without twists or knots, if the chain leg needs length adjustment use a shortening device. The lifting point should be seated well down in the terminal fitting, never on the point or wedged in the opening. The terminal fitting should be free to incline in any direction.

The chain may be passed under or through the load to form a choke hitch or basket hitch. The chain should be allowed to assume it's natural angle and should not be hammered down.

Where choke hitch is employed the WLL of the chain sling should be reduced by 20% (unless the LK choker hook is used)

Endless chain slings shall be rated in the same way as a 2-legged sling.

Home pocket loop shall have an internal loop top angle of max. 30°. Rule of thumb: Cross dimension of the load shall be max. 0.3 times the loop length (LL)

Definition: The home pocket is the shortening pocket of the top component directly above the clevis to which the chain is connected.

Sharp edges

Use edge protectors to prevent sharp edges from damaging the chain. If lifting over sharp edges reduce the working load with the following reduction tor.

Edge load	$R > 2 \times \text{chain } \varnothing$	$R > \text{chain } \varnothing$	$R < \text{chain } \varnothing$
Reduction factor	1.0	0.7	0.5

- The angle of the edge must not be below 90°.
- Chain links shall be protected from being bent or deformed and from receiving cuts or gouges.
- Chain sling WLL is to be reduced when chain is rigged over an edge radius R less than two (2) x chain diameter (d).
- Reduced WLL equals chain sling WLL from identification tag x reduction factor.
- Slings shall be padded or protected from the edges of their loads when the edge radius is less than 0.5 of the chain diameter(d).
- Slings shall be rigged to prevent chain from sliding over a load edge radius while lifting.
- Slings used in basket hitch shall have the loads balanced to prevent slipping.

When lifting with chain directly on lugs the lug diameter > 3x the pitch of the chain, otherwise the WLL must be reduced by 50%.

Maintenance

Periodic thorough examination must be carried out at least every 12 months or more frequently according to local statutory regulations, type of use and past experience.

- Overloaded chain slings must be taken out of service.
- If the lifting equipment is more than 25 years old, it must be recorded in the inspection register. An investigation into both its previous operating history and its current use should be made, as there is a potentially significant risk of fatigue, environmental impact etc.
- Chain and components including load pins which have been damaged, deformed, elongated, bent or showing signs of cracks or gouges shall be replaced. Carefully grind away small sharp cuts and burrs. Additional testing by magnetic particle inspection and/or proof loading at max. 2 x WLL may be carried out.
- The maximum permissible increase in hook aperture must not exceed 10% of the products nominal dimension.
- Check the function of latches, triggers and retaining pins / bushes, replace when necessary. Always use Gunnebo Industries original spare parts.
- Max. clearance between hook and latch. Note: For a Griplatch hook measure the difference between dimension A with unloaded spring and dimension A when the latch is pressed against the hook. Clearance B not applicable.

Size	Max. A (mm).	Max. B (mm).
6	2,2	3,5
7/8	2,7	4,5
10	3	6
13	3,3	7
16	4	9
18/20	5,5	10
22	6	11
26	6,5	12
32	7	13

- The wear of the chain and component shall in no place exceed 10% of the products nominal dimension. The chain link wear is defined and measured as the reduction of the mean diameter measured in two perpendicular directions, see picture.

$$\frac{d_1 + d_2}{2} > 0,9d_n$$

d_n = nominal diameter

Quality assurance

Type testing

In order to prove the design, material, heat treatment and method of manufacture, each size of component and chain has been type tested in the finished condition in order to demonstrate that the component and chain possesses the required mechanical properties. The following testing procedures are particularly relevant:

Test for deformation

The Manufacturing Proof Force (MPF) for the relevant size of the component is applied and removed. The dimensions after proof loading shall not alter from the original dimensions within the tolerances prescribed in our specifications and in the international standards.

Static tensile test

The Breaking Force (BF) for each component and size is verified. The verified value shall be at least equal to the Minimum Breaking Force (MBF) value. The MBF value is equal to the Working Load Limit (WLL) multiplied by the safety factor.

Fatigue test

By fatigue testing in pulsator testing machines the toughest conditions of service are simulated.

Manufacturing testing

During manufacture continuous process tests are carried out according to the requirements in our specifications and in the latest international standards. The following testing procedures are particularly relevant:

Non destructive test

3% of every production batch of forged components are subject to magnetic particle or dye penetrating examination.

Proof force / Visual inspection

Each individual forged component and chain link is tested to the Manufacturing Proof Force (MPF) level before delivery. The MPF level is 2.5 times the WLL, equal to 62,5% of the Minimum Breaking Force. Visual inspection is carried out on each chain link and each forged component to detect defects.

Static tensile and ultimate elongation test

During chain manufacturing, samples are tested and the Minimum Breaking Force (MBF) value and the total ultimate elongation are verified.

Bending deflection

During manufacturing, of chain and master links, samples are taken and the minimum bend deflection is verified.

Stress / elongation diagram

Safety factor 4:1. Working load limits are based upon equally loaded and disposed sling legs.

Rules for correct WLL

Where choke hitch is employed, the WLL of the chain sling should be reduced by 20 % (unless the LK choker hook is used).

Asymmetrical loading conditions

For unequally loaded chain slings, the following is recommended:

- A two-legged system is treated as a single-legged system.
- A three- or four-legged system is treated as a two-legged system.

Working load limits - United States

Note 1: Advice regarding the appropriate deration should be sought by the manufacturer

Note 2: The determination of the angle of the multi-leg sling is the largest angle at the apex of the configuration

Note 3: Reeved (choke) slings and basket slings, in a two leg configuration have a maximum angle for us of 60°

Note 4: In the 2-leg basket sling, the master link to be used shall be of an appropriate WLL and with intermediate links. This ensures that the factor 2,25 can be accommodated and that there is no overcrowding with back hooking.

Note 5: For engineered lifts, see Clause 7.2.2 in AS 3775.2:2014

WARNING:
Failure to read, understand and comply with the instructions, working load limits and specifications in this publication may result in serious injury or damage to property.

The lifting point family

Gunnebo Industries offer a full range of CE-marked lifting points that will fit most lifting and lashing applications.

Choosing the right lifting point for your operation can be a challenge since most lifting points can be used for several purposes. In order to give some guidance, and to share what we consider to be best practice, we have created a cross-chart that provide indications to which lifting point that might be best suited for your specific purpose.

Rotating eye lifting point RELP

The RELP is a compact and robust lifting point, ideal for top-mounting and when it is important to have quick and easy on-hooking. The lifting point is easy to assemble/disassemble with a standard allen key. On the bolt itself working load limit, mounting torque and manufacturing ID is stamped, so it is always available for the operator.

The RELP will automatically adjust to the loading direction which decreases the risk to load it incorrectly and endangering the lifting operation. For sensitive load surfaces the RELP is ideal, as the connecting sling hook will be positioned mainly parallel to the load surface, thus completely avoiding the hook causing damage on impact on the load.

Rotating lifting point RLP

The RLP has an easily dismountable D-ring to enable assembly of wiresling, master link or hook directly onto the lifting point.

RLP has a hexagon bolt (RFID prepared) to make it easy to disassemble/assemble with a wrench. The bolt is also clearly marked with working load limit, mounting torque and manufacturer ID so it is always available to the operator. The RLP rotates 360° and pivots 180°, making it strong, flexible and reliable.

De-centered lifting point DLP

The design of the DLP allows the link to be folded over the housing when idle, allowing the lifting point to be almost completely stowed away when not in use.

The closed, oblong link is also equipped with a "stay-up"-function for easy on-hooking, (sizes up to M24) especially when there is limited space. This saves both the load from damage due to impacts from the hook, as well as making rigging fast and easy. The DLP is ideal in narrow spaces, such as corners or edge position, as the housing has a compact design. DLP has a hexagon bolt (RFID prepared) to make it easy to disassemble/assemble with a wrench. The bolt is also clearly marked with working load limit, mounting torque and manufacturer ID so it is always available to the operator.

Ball-bearing lifting point BLP

The BLP is a very versatile lifting point and can safely be used for most applications. The ball-bearings in the BLP allow the load to be rotated during the lift, which is especially good when maintenance is needed on heavy tools and other types of equipment.

If the load surface is sensitive to impacts or scratches, the BLP is a good choice as it builds out from the load which makes it less likely that the lifting equipment will come in contact with it causing damage. The housing (RFID prepared) of the BLP is in-house drop-forged for increased strength and has a hexagon shape for easy mounting and dismounting. The housing is also clearly marked with working load limit, mounting torque and manufacturer ID so it is always available to the operator.

	RELP	RLP	DLP	BLP
Tight space	✓		✓	✓

Technical information

The following information aims to give advice and explain the most common questions in order to ensure safe and proper use of lifting points. Always refer to the user instructions of the specific model of lifting point before use. It is of the most importance that this information is known to the user and in accordance with the Machinery Directive 2006/42/EC this information must be delivered to the customer.

General advice

Reference should be made to relevant standards and other statutory regulations. Inspections must be carried out only by people who possess sufficient knowledge.

Before installation and before every use, visually inspect the lifting points, paying particular attention to any evidence of corrosion, wear, weld cracks or deformations. Please ensure compatibility of bolt thread and tapped hole.

The material construction, to which the lifting point will be attached, should be of adequate strength to withstand forces during lifting without deformation.

Ensure minimum thread depth, see table (d refers to bolt diameter).

RLP, RELP, BLP, DLP

Thread depth	Yield limit of base material
1 x d	For steel, yield limit >200 MPa
1,25 x d	For cast iron, yield limit >200MPa
2,5 x d	Aluminum
	For other metal alloys or base materials consult your Gunnebo Industries distributor.

- If the bolt length needs to be adjusted the bolt should be cut in a cold saw or lathe and temperature kept as low as possible during cutting. After cutting check the shape of the threads nearest the cut with an appropriately sized die (there must not be any burrs).
- The surface facing around the thread hole shall be flat (plane), clear of dirt and smooth to ensure perfect contact with the shoulder surface of the Lifting Point.

Nut and washer

The nut and washer must be the original equipment supplied from Gunnebo Industries to ensure the correct mechanical properties. No warranty, insurance or liability will be accepted if bolts not supplied by Gunnebo Industries have been used.

Extreme environments

The in-service temperature affects the WLL as follows:

RLP

Temperature (°C)	Reduction of WLL
-40 to +200 °C	0 %
+200 to +300 °C	10 %
+300 to +400 °C	25 %
Temperatures below -40°C or above 400 °C are not allowed.	

RELP

Temperature (°C)	Reduction of WLL
-40 to +100 °C	0 %
+100 to +200 °C	15 %
+200 to +250 °C	20 %
+250 to +350 °C	25 %
Temperatures above 350 °C are not allowed.	

BLP / DLP

Temperature (°C)	Reduction of WLL
-40 to +200 °C	0 %
Temperatures below -40° C or above 200° C are not allowed.	

Severe environments

Lifting points must not be used in alkaline (> pH10) or in acidic condition (< pH6).

Comprehensive and regular examination must be carried out when used in severe or corrosive environments. In uncertain situations consult your Gunnebo Industries distributor.

Surface treatment

- Hot dip galvanizing or plating is not allowed outside the control of the manufacturer.
- Acid or Alkaline cleaning is not allowed.

Protect yourself and others

- Before each use the Lifting Point should be checked for obvious damage or deterioration.
- Know the weight of the load and its center of gravity.
- Ensure the load is ready to move and that no obstacles will obstruct the lifting.
- Check the conformity of the load with the Working Load Limit.
- Prepare the landing site.
- Never overload and avoid shock loading.
- Never use an improper configuration.
- Never use a worn or damaged Lifting Point.
- Do not ever ride on the load.
- Do not ever walk or stand under a suspended load.
- Take into consideration that the load may swing or rotate.
- Watch your feet and fingers while loading/unloading.

Inspection

Periodic thorough examination must be carried out at least every 12 months or more frequently according to local statutory regulations, type of use and past experience.

- Ensure correct bolt and nut size, quality and length.
- Ensure compatibility of bolt thread and tapped hole – control of the torque.
- The lifting point should be complete.
- The working load limit and manufacturers stamp should be clearly visible.
- Check for deformation of the component parts such as body, load ring and bolt.
- Check for mechanical damage, such as notches, particularly in high stress areas.
- Wear should be no more than 10 % of cross sectional diameter.
- Evidence of corrosion.
- Evidence of cracks.
- Damage to the bolt, nut and/or thread.
- The body of the lifting point must be free to rotate.

Symmetric loading conditions

- For three and four leg lifts, the lifting points should be arranged symmetrically around the center of gravity and in the same plane if possible.
- The WLL for Gunnebo Industries lifting points is based on symmetrical loading.
- The lifting point must be positioned on the load in such way that movement is avoided during lifting.
- For single leg lifts, the lifting point should be vertically above the center of gravity of the load.
- For two leg lifts, the lifting points must be equidistant to or above the center of gravity of the load.

Asymmetric loading conditions

- For unequally loaded lifts we recommend that the WLL is determined as follows:
- 2-leg slings are calculated as the corresponding 1-leg sling.
- 3 and 4-leg slings are calculated as the as the corresponding 1-leg sling*

* (If 2-legs with full certainty are carrying the major part of the load, the WLL can be calculated as for the corresponding 2-leg sling).

WLP - Welding

Preheat the structure if the temperature is below 0°C; otherwise follow AS 1554 or other suitable national standard.

- Ensure that the WLP cannot move during welding by welding the corners of the welding block.
- Continue the weld around the welding block without interruption in a single operation.
- The nozzle or electrode should be at 45° (see Fig. C), so that the required penetration is obtained.
- The minimum throat (A) should be maintained.

Product	Min. plate gauge (Rm-1250 N/mm ²) t _{min} (mm)	Min. throat thickness (mm)
WLP 2.5 T	11	11
WLP 4 T	19	13
WLP 7 T	24	16
WLP 10 T	30	18
WLP 16 T	40	20

- The weld should not contain cracks or pores.
- Do not cool the weld with water. It should be left cool natural

Working Load Limits* WLP

1-leg		2-leg		3- and 4-leg	
Typ	WLL tonnes*	α 0-90° β 0-45°	α 90-120° β 45-60°	α 0-90° β 0-45°	α 90-120° β 45-60°
WLP-2.5T	2.5	3.5	2.5	5.2	3.7
WLP-4T	4.0	5.6	4.0	8.4	6.0
WLP-7T	7.0	9.8	7.0	14.8	10.5
WLP-10T	10.0	14.1	10.0	21.2	15.0
WLP-16T	16.0	22.5	16.0	33.6	24.0

Working Load Limits* SLP

1-leg		2-leg		3- and 4-leg	
Typ	WLL tonnes*	α 0-90° β 0-45°	α 90-120° β 45-60°	α 0-90° β 0-45°	α 90-120° β 45-60°
SLP-1T	1.0	1.4	1.0	2.1	1.5
SLP-3T	3.0	4.2	3.0	6.3	4.5
SLP-5T	5.0	7.0	5.0	10.6	7.5

Working Load Limits* ELP

1-leg		2-leg		3- and 4-leg	
Typ	WLL tonnes*	α 0-90° β 0-45°	α 90-120° β 45-60°	α 0-90° β 0-45°	α 90-120° β 45-60°
ELP-16-8	1.0**	1.4	1.0	2.1	1.5
ELP-20-8	1.5**	2.1	1.5	3.1	2.3
ELP-24-8	2.0**	2.8	2.0	4.2	3.0
ELP-30-8	3.0**	4.2	3.0	6.3	4.5

Note! The above loads apply to normal usage and equally loaded legs. For asymmetric loaded chain slings, the following is recommended:

- A two-legged system is rated as a single-legged system.
- A three- or four-legged system is rated as a two-legged system.

** In case of 1-leg application where loading is limited to straight loading in the direction of thread (no bending force) it is possible to use ELP with four times higher WLL. Note! Threaded depths need to be at least 1xM for steel, 1,25xM for cast iron and 2xM for aluminum alloy.

Instructions for safe use	4:15
---------------------------	------

WARNING:

Failure to read, understand and comply with the instructions, working load limits and specifications in this publication may result in serious injury or damage to property.

Feel confident in every situation

Our lifting systems are valued for their long durability and high quality. Whether the working environment is hot or cold, our systems assure lifting operations with high safety and functionality.

Gunnebo Industries shackles are made from a range of steel qualities, including acid proof stainless steel and high grade alloy steel to comply with the most stringent specifications. Our workshops comprise all facilities and systems for the manufacturing and control of a top quality product. This includes tool design, an advanced tool shop, forging, heat treatment, machining, hot dip galvanizing and quality control.

We offer a range of DNV 2.7-1 Type approved lifting shackles for offshore containers, developed for the tough conditions of the offshore industry, where safety must be of the highest priority at all times. The heat treatment of these products ensures the proper ductility and strength to sustain shock loads which may be imposed when the container is lifted from the deck of a vessel.

Furthermore we offer Standard shackles, Super lifting shackles with increased working load limit, ROV shackles, Heavy duty shackles, Wide-Body shackles, Mooring shackles, Stainless Steel shackles etc.

Make sure you have the original

- High quality shackles according to EN 13889 and U.S. Fed.Spec RR-C. 271 (grade A and grade B)
- Consistent product quality
- Long experience of shackle production using modern manufacturing methods
- Local availability of expertise from Gunnebo Industries subsidiary or distributors

To ensure you have a genuine Gunnebo Industries Shackle, it should be marked as below:

Dee Shackle No 834

Standard:	EN 13889 and U.S Fed. Spec. RR-C-271
Material:	High Tensile Carbon Steel, Quenched and tempered, Grade 6
Finish:	All parts hot dip galvanized, pin brown painted on top of galv.
Safety factor:	6:1
Documentation:	Test certificate and traceable raw material /inspection certificate according to EN 10204 - 3.1

Arctic Shackle No 856

Bow shackle with safety bolt

Unique benefits with the Arctic Shackle

Adverse weather and rough sea conditions in combination with extremely low temperatures, as often encountered for instance in the North Sea, places tough requirements on the products used. Gunnebo Industries has a range of shackles specially designed for these conditions. The Arctic Shackle is type approved to DNV 2.7-1 Offshore containers and meets the impact requirements of 42 J at – 40 degrees °C.

The Arctic Shackle is a grade 8 shackle with all parts hot dipped galvanized, including the safety bolt, and has the characteristic brown color marking.

Standard:	DNV 2.7-1, U.S. Fed. Spec. RR.C-271 and EN-13889
Material:	Special Alloy Steel, Quenched and Tempered, Grade 8
Finish:	All parts hot dip galvanized + brown color marking
Safety factor:	As specified in the table below
Documentation:	Test certificate and traceable raw material / inspection certificate according to EN 10204 - 3.1 DNV 2.7-1 and DNV 2.7-3 Type Approval Certification.
Temperature:	- 40 °C to 200 °C

Super Shackle No 858

Bow shackle with safety bolt

Unique benefits with the Super Shackle

In certain situations, a demand for extra Working Load Limit occurs, in others the lifting environment has limited space for the lifting application. Gunnebo Industries has therefore added the Super Shackle to the range, enabling the same Working Load Limit on a 22 mm Super shackle as for a 28 mm Standard shackle.

The Super shackle meets the US Federal Specification RR.C-271. It is a grade 8 shackle and has all parts hot dipped galvanized, including the safety bolt.

Standard:	U.S. Fed. Spec. RR.C-271 Type IVA Class 3, Grade B
Material:	High Tensile Steel. Quenched and Tempered, Grade 8
Finish:	All parts hot dip galvanized + brown color marking
Safety factor:	5:1
Documentation:	Test certificate and traceable 3.1 certificate
Temperature:	-20 °C to 200 °C

Aquaculture

Because safety is everything

Gunnebo Industries have an in-depth knowledge of the demands aquaculture puts on the products supplied. With over 100 years of experience gained manufacturing shackles and chain for maritime use, which allows us to provide our clients with the highest level of satisfaction, even in the most extreme environments.

Whilst other producers have been focusing on low cost to the detriment of performance, we have focused on quality and improved properties to give best value for money. Products such as our hot dip galvanized chain and shackles are designed to satisfy the specific demands from the global fishing industry.

Gunnebo Industries products are the best choice when safety and quality comes first. We have always and will continue to provide the Aquaculture industry with the preferred products available on the market. All of our aquaculture products are independently approved according to Norwegian standard NS 9415. NS 9415 with this being the first national standard for aquaculture mooring systems.

Our continuous focus on quality has been proven by our achievements with the key industry standards:

- Approved according to ISO 9001
- Approved according to ISO 14001
- Product certification according to NS 9415

Mooring Shackle No 852

Unique benefits with Mooring Shackle

The Mooring Shackle has a sunken bolt that locks into the shackle to prevent rotation (unintentional loosening of the nut). The sunken bolt also reduces the risk of the shackle interacting with the net.

Fatigue resistance is increased by the addition of 25% extra material in the bow (increased life span and safety).

The shackle has a spacious bow for connecting thimbles, rope and mooring/connecting plates.

Standard: Third party approved according to relevant Norwegian aquaculture standards

Material: High Tensile Steel. Quenched and Tempered, Grade 6

Finish: All parts hot dip galvanized + brown color marking

Plastic clip provided as standard safety pin for 28T - 90T, stainless steel A4 split pins provided as standard for 110T and 150T.

Art.no	MBL tonnes	D Trade size		A	C	E	D2	D1
		mm	inch					
*A085219	28	19	3/4"	44	100	58	48	22
*A085222	40	22	7/8"	52	125	68	52	25

ROV Shackles

The ROV Retrieve Shackle is designed for smooth and easy use in retrieving and releasing subsea lifting and rigging operations. It has no loose parts, in closed or opened position, and there is therefore no need for wires or monkey fists that will risk snagging or getting in the way.

The high visibility handles are close-die forged and has double safety functions - shark tooth locking with indicator that will show if the shackle is in open or locked position as well as the spring loaded handle. The handle is the same size, regardless of size of shackle.

The ROV Retrieve Shackle no. 861 is an easy to operate shackle, saving valuable time and money.

ROV Retrieve Shackle No 861

All shackles have unique marking

Standard:	Dim. according to EN 13889

* Will not be delivered with lifting certificate.

Technical information

2006/42/EC highlights the responsibility of the manufacturer, distributor and end user of lifting gear. Gunnebo Industries shackles are specified, monitored and documented in compliance with the most stringent requirements for the product concerned. A certified ISO 9001:2008 system is an evidence of our quality standard.

Instructions for safe use

1. The user is obliged to keep a valid Test Certificate for any shackle being used in a lifting operation.
2. Before use each shackle should be inspected to ensure that:
 - all markings in the body and the pin of the shackle are legible and in compliance with the relevant Test Certificate.
 - the shackle pin is of the correct type.
 - the body and pin are not distorted or unduly worn.
 - The body and pin are free from nicks, cracks, grooves and corrosion.
 - If there is any doubt with regards to the above criteria being met, the shackle should not be used for a lifting operation.
3. It is important to ensure that the pin is safely locked after assembly. For repeated lifting between inspections of the gear, it is recommended to use a safety bolt type shackle with nut and split-pin - the user must ensure that the split-pin is fitted, to prevent the nut from unscrewing during use.
4. Incorrect seating of a pin may be due to a bent pin, damaged threads or misalignment of the holes. Do not use the shackle under these circumstances, but refer the matter to a competent person (i.e. dealer, manufacturer)
5. Shackles should be fitted to the load in a manner that allows the shackle body to take the load in a true line along its centerline to avoid undue bending stresses which will reduce the load capacity of the shackle. When using shackles in conjunction with multi-leg slings, due consideration should be given to the effect of the angle between the sling legs. When a shackle is used to secure the top block of a set of rope blocks the load on this shackle is increased by the value of the hoisting effect.
6. To avoid eccentric loading of the shackle it is recommended to distribute the load as far as possible over the total length of the pin or to use loose spacers.
7. Never modify, repair or reshape a shackle by welding, heating or bending as this will affect the nominal WLL.
8. Never heat treat a shackle as this may affect the WLL.

4

Reduction for side loading

Load angle	New Working Load Limit
0°	100% of original WLL
45°	70% of original WLL
90°	50% of original WLL

Side loads should be avoided as the products are not designed for this purpose. If side loads cannot be avoided, the following reduction factors must be taken into account:

Avoid applications where, due to load movement, the shackle pin can rotate

Shackle must be loaded in straight direction

Temperature

If extreme temperature situations are applicable, the following load reductions must be taken into account.

Reduction for elevated temperatures

Temperature:	New Working Load Limit
0 - 200 °C	100% of original Working Load Limit
200 - 300 °C	90% of original Working Load Limit
300 - 400 °C	75% of original Working Load Limit
> 400 °C	not allowed

GrabiQ Chain KLA, Grade 10 (400)

Short link lifting chain

Heat treatment

Hardened and tempered.

Note! For chain grade 10 (400) the maximum in service temperature is 400°C.

Surface treatment

Painted blue

Fulfills the requirements in:

EN 818-2:2008 (WLL+25%,
material dimension \varnothing +10%)

Note: This chain is marked with "8+" in addition to the marking required by the machine directive

Fulfills requirements in: EN 1461:2009 (Average surface thickness 85 µm)

** Average surface thickness 70 µm

Technical information

Chain manufacturing - Quality and strength requirements

Chains are divided into grades based on minimum nominal breaking stress.

Chain Grade	Surface treatment	Code	Minimum breaking stress N/mm ²	Load factors			Typical use
				WLL	MPF	Breaking force	
8	Yellow U	KL	800	1	2.5	4	General lifting (KL), Container lashing (LL). Extra heavy towing (ML), Lashing (KL, LL). Fishing (KL, ML, LL)
	Black B	ML	800	-	1	4	
	Hot Dipped Galvanized Z	LL	800	-	1	4	
10	Blue A	KL	1000	1	2.5	4	General lifting

Testing and quality control GrabiQ & Classic Chain (Grade 10 & 8)

In each step of the manufacturing of the chain, our systematic quality monitoring will ensure the highest safety and the longest life span in the product. Here are some especially important aspects of quality:

Material

The incoming material is supplied with test certificates only from qualified manufacturers and according to our stated material specifications.

Manufacturing

During forming and welding, the operators continuously control that the links meet the specified dimensions both before and after welding.

Single link samples are continuously mandrel tested on the weld. Shape, dimensions and deburring are then inspected visually.

Sample lengths are heat treated and then destruction load tested. Following these tests, the chain is heat treated.

Hardening and tempering is carried out continuously in computer controlled induction furnaces with regular samplings.

Proof force

The entire chain is test loaded. The manufacturing proof force for short link chain is 2.5 times the permitted working load limit. This gives the chain high safety in use. The chain is then visually inspected and cut into delivery lengths. A sample is taken from every length and tested to destruction. Dimensions and shape are also checked. All results are documented.

Marking and traceability

The international standards for lifting chain require that the chain is marked with Grade and Manufacturers ID. On our chain we stamp "SWE - 10G - H - 10G - 4", where the "H" and the "4" is the combination for the traceability code. In case of the unlikely event of chain failure, we can trace the specific chain link back to the very batch and raw material as well as the year and place of manufacture. Each individual delivery length also has its unique batch number.

Use

- Never lift with a twisted chain.
- Use shortening hooks, knotting is not allowed.
- Use edge protectors to prevent sharp edges from damaging the chain.

Maintenance

Periodic thorough examination must be carried out at least every 12 months or more frequently according to local statutory regulations, type of use and past experience.

1. Overloaded chain slings must be taken out of service.
2. Chain and components including load pins which have been damaged, deformed, elongated, bent or showing signs of cracks or gouges shall be replaced. Carefully grind away small nicks and burrs.
3. Additional testing by magnetic particle inspection and/or proof loading at max. 2 x WLL may be carried out. The wear of the chain and component shall in no place exceed 10% of the original dimensions.
4. The chain link wear - max. 10% - is defined as the reduction of the mean diameter measured in two directions.

Severe environment

Chain and components must not be used in alkaline (>pH10) or acidic conditions (<pH6). Comprehensive and regular examination must be carried out when used in severe or corrosive inducing environments. In uncertain situations consult your Gunnebo Industries dealer.

Extreme temperature conditions

The in service temperature effects the WLL as following :

Temperature (°C)	Reduction of WLL			
	Grade 10 chain (400)	Grade 10 chain (200)	Grade 10 components	Grade 8 chain & components
-40 to +200 °C	0 %	0 %	0 %	0 %
+200 to +300 °C	10 %	Not allowed	10 %	10 %
+300 to +400 °C	25 %	Not allowed	25 %	25 %

After short heat exposure, maximum one hour, the sling reverts to its full capacity. Upon return to normal temperature, the sling reverts to its full capacity within the above temperature range. Chain slings should not be used above or below these temperatures. **For chain grade 10 the maximum in service temperature is 200° C.**

Definitions

Proof force:
Each individual chain link is tested to the Manufacturing Proof Force (MPF) level before delivery. The MPF level is 2.5 times the WLL, equal to 62.5% of the Minimum Breaking Force.

Breaking force (BF):
The highest static force a chain is exposed to during test loading before breaking.

Working load limit (WLL):
The maximum permitted load on a lifting chain under normal (vertical) lifting conditions.

Total ultimate elongation:
The elongation of the test item, relative to the original length, at the moment of breaking.

Johnson Blocks

With 50 years of excellence and industry leadership, Johnson Blocks has deep roots in the oilfield and the OEM crane industries. Our crane blocks are dominant in the North American lifting industry and the benefits of using Johnson blocks are many; with a proven record of engineering innovations and dependability, we have provided blocks all over the world for decades, always delivered with the highest quality, providing our customers a peace of mind.

Quick Reeve - Mobile Crane Block

Standard features

- Quick release, zinc plated, rope retention pin meets OSHA requirements for rope retention. Cannot be completely removed from block to avoid pin loss.
- J-Latch™ is standard equipment for blocks up to 250 short tons. Larger blocks are equipped with standard bar latches.
- Johnson J-Latch™ heavy duty, steel, lockable, spring loaded latch meets OSHA personnel lifting requirements.
- The Johnson J-Latch™ provides a fast hook deformation inspection point.
- Quick Reeve™ upright design rests on its own hook for a stable base while reeving.
- No bulky, drop down, trap door to handle or damage.
- Wire rope end fitting will pass through block without removal from wire rope.
- 5 – 330 short tons capacity
- 4:1 design factor
- 1, 2, 3, 5 or 7 sheaves
- 250 mm - 760 mm sheave diameters
- Reeving pins for all models
- Roller bearing sheaves
- Direct-channel sheave bearing lubrication through center pin
- Flame hardened grooves on sheave sizes 400 mm - 610 mm in diameters
- Dual action (swing/swivel) roller thrust bearing hooks
- Forged steel hooks, up to 30 short tons
- Total disassembly possible
- Meet ASME 30.5 standard

Optional features

- Forged steel hooks, 35 - 300 short tons
- Duplex hooks available from 25 short tons
- Anti-rotation hook locking devices, all models
- Swivel safety anchor shackles, all models
- Center top dead end available for blocks with 3 sheaves or less
- Sheave shrouds, all models
- All weighted models have detachable cheek weights in cast iron or steel
- Proof test and certification, radiographic, magnetic particle, and other non-destructive testing to specification by customer
- Bronze bushings available
- Other sheave combinations available
- Can be manufactured to API, Lloyd's, DNV, ABS, CCS and CE

Shorty "J" Crane Blocks

Shorty "J" represents the broadest line of standard crane blocks in the industry. In all, we manufacture more than 1500 standard models of crane blocks not including options.

Standard features

- 10 - 325 short tons capacity
- 4:1 design factor
- 1, 2, 3, 5 or 7 sheaves
- 300 mm - 610 mm in sheave diameters
- Roller bearing sheaves
- Direct-channel sheave bearing lubrication through centre pin
- Flame hardened grooves on sheave sizes 406 mm - 610 mm in diameters
- Dual action (swing/swivel) roller thrust bearing hooks
- Forged steel hooks, up to 30 short tons
- J-Latch™ is standard equipment for blocks up to 250 short tons. Larger blocks are equipped with standard bar latches
- Johnson J-Latch™ heavy duty, steel, lockable, spring loaded latch meets OSHA personnel lifting requirements.
- The Johnson J-Latch™ provides a fast hook deformation inspection point.
- Meet ASME 30.5 standard

Optional features

- Forged steel single barb hooks, 35 - 300 short tons
- Duplex hooks available from 25 short tons
- Anti-rotation hook locking devices, all models
- Swivel safety anchor shackles, all models
- Sheave shrouds, all models
- All weighted models have detachable cheek weights in cast iron or steel
- Bronze bushings available
- Other sheave combinations available
- Proof test and certification, radiographic, magnetic particle, and other non-destructive testing to specification by customer
- Can be manufactured to API, Lloyd's, DNV, ABS, CCS, CMAA and CE

Fixed Bail Construction and Marine Rigging Blocks

Beginning with 100 standard models, you are assured of selections that fit your every need. The lowest weight to capacity ratios, the quickest rigging and the easiest maintenance are a few additional benefits that prove once again that Johnson Blocks are consistent in quality and value.

Standard features

- 10 to 135 short tons
- 4:1 design factor
- 1 to 6 sheaves
- Full coverage side plates and center plates
- Top dead-end shackle
- Tapered roller bearings
- Oval pattern side plates

Optional features

- Bronze bushings
- Diamond pattern side plates
- Fully galvanized for corrosion resistance
- High capacity, custom engineered blocks available upon request

Overhaul Balls

Provide the overhaul weight necessary to counter bearing friction and winch-to-boom-tip line weight. Because these units must meet a wide range of field applications, we offer an equally wide range of unit sizes. It is in fact, one of the widest ranges available. Over 240 models; 3 - 25 metric tonnes WLL. Non-swivel balls are also available.

Standard features

- 3 to 25 metric tonnes
- 4:1 design factor
- Heavy duty J-Latch standard

Optional features

- High capacity, custom engineered balls available upon request.

Split Overhaul Ball

Design Factor 4:1

Art.no.	Model No.	Weight kg	Wire Rope Size	F Ball Dia.
452245	OB 50 SPLIT	22.7	Suits 13 - 22 mm wire rope	184
452179	OB 100 SPLIT	45.4	Suits 16-22 mm wire rope	235

Top Swivel Overhaul Ball 3 - 25 metric tonnes

Design Factor 4:1

Key to Top Swivel Overhaul Ball Model Numbers:

OB - Overhaul Ball
4EE - Swivel Model
85 - Ball Weight (lb)
4 - Type

To order please specify the model number.

Swivels

Our Johnson thrust bearing swivels are widely used for the primary purpose of allowing the natural twist in wire rope to rotate as necessary without affecting the suspended load. Standard swivels are available in six different end fitting combinations, from 3 to 30 metric tonnes WLL.

Simple and compact, the swivels are engineered for long life and economical cost. Hooks are forged alloy steel, lubrication fittings are recessed, and a generous bronze bushing assures toughness and long life.

Standard equipment

- Forged hook with latch
- Roller thrust bearing
- Large bronze thrust bushing
- Recessed lubrication fitting
- Large lubricant reservoir
- Proof load test

Optional equipment

- Custom end fitting sizes
- Custom sizes above 30 metric tonnes WLL
- Anti-corrosion coatings
- CE compliant upon request.

The simple and compact design of a Johnson Swivel

Open Wedge Sockets

Open Wedge Sockets combine positive attachment with optimum versatility. Easy-to-change Johnson Wedge Sockets are a high strength cast alloy steel with charpy value of 34J (25ft-lb) at -20C (-4F). Each socket accepts at least two different ductile iron wedges. This allows the socket to be used with more than one rope size. Together, wedge and body act as a vise which grips the wire rope and locks it into place.

Key to Open Wedge Socket Model Numbers:

- WS - Wedge Socket
- FS - Federal Specification
- 6 - Body Number
- 19 mm - Wire Rope Wedge Size

To order please specify the model number.

Open Wedge Socket 9.5 mm to 38 mm

Provides a termination efficiency 80%, based on the catalog minimum breaking force of 6x19, 6x25, and 6x36, IWRC wire rope.

Snatch Blocks

Johnson Snatch Blocks have the convenient side opening feature. This is true even of our heavy duty top dead-end models, and makes it easy to reeve the block without removing any fitting from the end of the wire rope. Other features include choice of swivel hook, shackle, eye fittings or Tailboard Blocks which have no fittings at all.

Standard features

- Rugged and reliable
- 4:1 design factor
- Easy-open side plates
- Metric rated
- Large hand nuts
- Retainer on latch pin
- Bow shackle with retainer pin
- Bronze bushing

Optional features

- Proof load
- Roller bearings
- Marine epoxy paint
- Heavy duty J-latch
- Larger sizes
- Customized blocks
- CE compliant upon request

Wide range

We offer over 250 models and sizes, from 2 to 30 metric tonnes. Sheave sizes from 76 mm to 610 mm in diameter. Multiple rope sizes and end fittings available.

Rugged

Johnson's famous durability is well established in the industry. These blocks stand up to the toughest applications, whether in blistering sun or under icy blizzard conditions.

Reliable

From built-in strength comes the reliability long associated with the Johnson name. These blocks are performers, day after day and year after year.

Many choices

Singles, doubles, top dead end, towing, oilfield, pipe laying and general construction. Sizes and specific models for all.

Convenient

Large, easy to grip hand nuts on all models, especially on the smallest models. Makes it easier to open and close under all conditions without removing gloves, and easy to tap with a hammer to loosen or lock down.

Secondary securement

All hand nuts and shackles are fitted with "R" pins as a secondary securement device, for example where inspection is limited or infrequent due to location or other factors.

* Note: Additional Wire Rope Sizes Upon Request

- API 8C PSL1 compliant
- Concurrent hardening™ on sheave grooves
- Equipped with tapered roller bearings
- Optional cheek weight kits available
- Non-spring loaded duplex hook
- Hook positioning locking device, 8 positions
- Includes rod hook clevis as standard
- Hook latches with self-retaining bolt

- Life cycle tested
- API 8C PSL1 compliant

Manhandler Snatch Block

Design Factor 12:1, CE marked

Johnson’s Manhandler Snatch Blocks (MHSB) are suitable for personnel hoisting when properly incorporated into a compliant personnel hoist system and maintained in good working order.

See the Manhandler Warnings and Use Limitations Brochure available from Gunnebo Industries and your distributor.

- Standard painted finish
- For lifting personnel
- Sealed roller bearings
- Interlocking internal design
- R-pins retainers
- Secondary tether attachment points

Oilfield Blocks

We have produced Johnson oilfield equipment for over five decades. Because of our expertise in sheaves and blocks, Gunnebo Industries has become a respected manufacturer for the Petroleum industry. We know the needs and we have the know-how to fulfil them with quality lifting devices. High capacity, custom engineered oilfield blocks available upon request.

J-Latch Replacement Kit

Johnson's exclusive J-Latch is a uniquely engineered hook latch system providing outstanding flexibility and durability. Its heavy-duty design incorporates a steel beam that positively engages a special recessed area in the hook tip. The removable two-position pin allows the J-Latch to function either as a locked bar or as an automatic spring latch.

The J-Latch meets OSHA requirements and is standard equipment on Johnson crane blocks through 330 short tons, all Johnson overhaul balls, and all swivels and snatch blocks with hooks.

Art.no.	J-Latch Kit no.	Crane Block WLL (short tons)	Weight (lb)	Weight (Kg)	Hook Part Numbers

474206	JL200-300	200-330	35	15.9	1096 / 4012 / 11363

Note: J-Latches fit only Johnson hooks with a lock pin hole drilled through hook tip.

General Precautions

Stay within the Working Load Limits of all Gunnebo Industries products. The Working Load Limits assigned Gunnebo Industries products reflect our best engineering assessment. They should never be exceeded, regardless of the strength of the wire rope being used. Nor will we accept responsibility for any rating request which would result in a lower design factor than that we judge to be adequate. (See design factors indicated in this catalog. Standard: 4 to 1.)

Note that Working Load Limits apply only to loads held uniformly in direct tension. They do not apply to shock loads, which can multiply the static weight factor many times over. Likewise, they do not allow for hook tip loading, side loading, or for bending, torsional and related loads.

Note also that Working Load Limits apply only to new products as they are shipped from the factory. Age, type of service and environmental conditions can subsequently affect these limits, and periodic tests should be undertaken to assure the product will perform in accord with existing regulations and sound operating practices.

Do not misuse Gunnebo Industries Blocks hook latch attachments. Gunnebo Industries Blocks hook latch kits are designed solely for loose sling retention. They are not anti-fouling devices, and caution must be exercised to prevent a latch from supporting any portion of the load. Protect the latch, and thereby the workmen below, by: 1) continuous inspection to see that the latch is undamaged, in place, and properly centered on the hook; 2) taking care not to "crowd" the latch with over-sized ropes or "stiff" riggings; making sure the load is properly seated prior to each lift.

Use caution in applying standard Gunnebo Industries products to severe vibration or sharp-blow situations. Activities such as pile driving can have adverse effects upon the life of the product and, therefore, may not be covered by the warranty. Standard cheek weights and overhaul balls, for example, are not designed as load-bearing members. They can break under extreme vibration or sharp blows.

Severe working conditions can also create problems for the undersized swivel or standard block. If you anticipate such conditions, have the factory fabricate the block to your particular job requirements. Or, in the case of an existing block, take the following precautions.

- 1) Make sure the block's capacity rating is high enough. If the block has a hook and latch, consider replacing them with the swivel tee and safety anchor shackle that is available as an option on all "J" Blocks.
- 2) Remove any cast iron cheek weights and replace the existing tie bolts with shorter ones. If additional weight is required, have Gunnebo Industries supply steel plate cheek weights to your specifications.
- 3) Tack weld and all tie bolt nuts, trunnion nuts and lower fitting shank nuts to the ends of their respective shafts. Weld the center pin nut, if any, to the side plates of the block itself.

Never use the yielding point of a hook, bail or other fitting as a "gauge" of its capacity. Trusting a fitting to bend before it breaks is a dangerous practice and should never be used as an excuse to exceed the Working Load Limit.

Lift only those loads for which our product was designed. Federal crane regulations prohibit the transport of personnel on any load or wire rope attachment (OSHA 1910. 180-h-3-v).

Never "two-block," or allow any block, ball, or other attachment to be drawn into another under power.

Inspect your equipment regularly for excessive wear. Wear is a fact of life, and it will eventually affect load fitting cross sections and other critical component dimensions. Since worn components do not have the same WLL rating, the responsibility for their maintenance and continued use is entirely up to the purchaser/user. To be certain, arrange with federal and local regulations. For general maintenance instructions, see page 14-16, this catalog.

When using wedge sockets note that two precautions should be taken.

1. Make sure that a sudden jolt or impact does not dislodge a wedge. When installing wire rope, always pre-load the wedge with wire rope in place. Check frequently to re-tighten or reposition as necessary.
2. Make allowance for the crimping effect common with all types of wedge sockets. Experience shows it will reduce the Safe Working Limit of a line by 20 percent.

General Precautions

Never weld any load bearing components such as hooks, shackles or other load fittings. Any welding to a load fitting could adversely affect the strength capabilities of the material.

Do not immerse standard Gunnebo Industries products in water. Contact our Engineering Department for those special product designs necessary to meet fresh and salt water applications.

Make sure your wire rope is sufficiently rated for its overhaul ball and socket assembly attachments.

Gunnebo Industries offers a variety of wedge socket overhaul balls. As with other products, some of these balls have strengths substantially greater than the ropes to which they have been applied. To be sure, consult the chart "Working Load Limits of Wire Rope." Type, application and WLL are the sole responsibility of the customer and the end user.

See website or user instructions for assembly instructions.

Meets listed current specifications and standards at time of publication of this catalogue.

Attention to the service temperature (ST) given on the WLL nameplate is required. Gunnebo Industries blocks have

a temperature at which lifting precautions are required because temperatures below the given ST affect the block material properties. Lifting above 75% of the WLL AND BETWEEN THE ST and -40F (-40C), must be done at a slow and steady rate to avoid stress spikes common in normal hoisting dynamics. 75% of the WLL must not be exceeded when lifting in temperatures below -40F unless extreme temperature materials have been used in the block construction. Blocks are available with extreme temperature materials on special request.

Do not overload individual sheave bearings by subjecting a partially reeved block to full load applications. Bearing life expectancy is based on the use of all available sheaves under maximum parts of line. For example, in a 30-ton block with three sheaves, each sheave will have a bearing capacity of 10 tons. If only one sheave is used, it is reduced to 10 tons.

Typical WLL nameplate

		JOHNSON BLOCKS		SERIAL NO.	
MODEL					
ASSY. NO.				DESIGN FACTOR	
WLL	Tons		MTons		
WIRE ROPE	in		mm		
WEIGHT	lb		kg		
SERV TEMP	°F		°C		
GUNNEBO INDUSTRIES TULSA, OK. U.S.A.				PN: 56413	

Important safety information is provided by the two plates affixed to each product.

Typical safety caution plate

<p>WARNING – USE CAUTION READ BEFORE USING</p> <p>Violation of these instructions will be at sole risk of user. WORKING LOAD LIMIT (W.L.L.) shown on nameplate or catalog SHOULD NEVER BE EXCEEDED. Doing so will permanently void warranty. DESIGN FACTOR is the ratio of ultimate (breaking) strength to W.L.L. Yielding will occur at loads well below ultimate. NEVER EXCEED THE W.L.L. THE OPERATOR SHALL NOT hoist, lower, swing, support or transport personnel on this hook assembly unless complying with applicable federal and local regulations. Doing otherwise is at the sole risk of user. See other safety and maintenance instructions in JOHNSON BLOCKS catalog.</p> <p>Do not paint over or remove this plate or nameplate.</p> <p>Gunnebo Industries Corp. Tulsa, Oklahoma</p> <p>PN-1160</p> <p>160</p>

Inspection and Maintenance

Company policy Regarding Product Repair and Parts Replacement

1. Any claim arising from the use of Gunnebo Industries products is subject to the strict performance of the inspection and maintenance activities outlined in the following schedules. Maintenance instructions are shipped by the factory with each product or invoice line item and are available in quantity at no extra charge.
2. Should any Gunnebo Industries product become worn or deficient, any attempt at unauthorized field repairs will be taken entirely at the user's own risk and cost. A better approach is to call the Tulsa plant in advance to discuss the specifics. Then, to return the item in question, the freight prepaid, for a repairs cost estimate.
3. Gunnebo Industries name plates and caution plates must remain in place and visible at all times. In the event either of these plates is lost or rendered illegible, arrangements for their replacement are to be made promptly with the factory.

☒ Nut/Retainer Checklist

All nuts, set screws, and other retainers should be checked for tightness every 14 to 30 days, depending on the operating conditions. Review general precautions relating to high vibration application.

☒ Center Pin Retaining Nuts

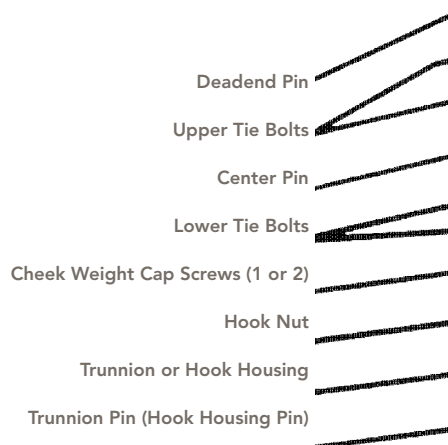

Check regularly for any signs of backing off due to high

vibration or other causes. If the block has tapered roller bearings (as indicated by T on name plate), tighten the center pin retaining nut(s) until all side play has been eliminated from the sheaves and re-set the lock type set screws.

For other sheave bearing types (bronze bushing – B: roller bearing – R), a running clearance of 1/32 inches (0.79 mm) at the sheave hub is required. Since to ignore this clearance is to risk sheave bearing damage, it may be approximated as follows:

- (1) Slowly tighten the retaining nut(s), testing the roller capability of the sheaves with your hand as you do so.
- (2) When there is any one of the sheaves that can no longer be turned in this fashion, stop. Back off the nut(s) just enough so that all sheaves will rotate freely. Then re-stake or tighten all set screws as applicable.

Note that any re-working of a block without prior factory authorization will be done entirely at the user's own risk and expense.

Providing innovative, safe and reliable solutions since 1764

Inspection and Maintenance

- ✓ **Cheek Weight Cap Screws**

Cap screws should always be tightened down and locked with a self-locking jam nut inside the side plate, or with a lock washer located under the head of the cap screw (all the way inside the cheek weight counter-sink hole).
- ✓ **Cotter Pins**

Where furnished, cotter pins must always remain in place. Replace any damaged or missing pins before resuming work.
- ✓ **Load Fitting Set Screws**

These screws are staked in place by the factory. Should they attempt to back out, re-tighten and re-stake thoroughly.

NOTE: A GALLED HOOK NUT CANNOT BE FORCED WITHOUT ENDANGERING THE THREADS. In the event foreign matter has caused the nut assembly to gall, locking it in place, return the product, prepaid, to our plant. Or call us for instructions.
- ✓ **All Side Nuts With Set Screws**

Where used with center pin nuts, hook trunnion pin nuts, etc., set screws will be jammed radially into the threads by the factory. Check all for tightness and tighten as necessary to re-establish the jamming action.
- ✓ **All Side Nuts Without Set Screws**

Any tie bolt or other nut that does not utilize set screws should be checked to see that it remains in its original position. Re-tighten and re-stake as necessary. If still uncertain: a) tack weld any center pin nuts to their respective side plates; b) weld any trunnion nuts to the ends of the pins themselves.
- ✓ **Spirolox Retaining Rings**

Where furnished on the ends of block center pins and trunnions, these rings must remain in place. If damaged or missing, contact the factory for a replacement. Do not resume work.
- ✓ **Tie Bolt Nuts – Upper**

Inspect and re-tighten firmly as required. Re-stake thoroughly.
- ✓ **Tie Bolt Nuts – Lower**

Re-tighten any loose nuts firmly. If originally staked, re-stake. If held by set screws, reset these screws securely.
- ✓ **Trunnion Pin Nuts – Lower**

Re-tighten nut to the point where the trunnion is just able to rotate. Secure the set screw.
- ✓ **Swivel Barrel Set Screws**

Check for any signs of backing out. Re-tighten and re-stake thoroughly as necessary. If you still have reservations, replace the swivel and have it returned to the factory for inspection.

Lubrication Schedule

Lubrication Frequency		Item
Under Continuous Operating Conditions	Under Intermittent Operating Conditions	
24 hours	14 days	Swivels and swivel overhaul balls
8 hours	14 days	Blocks with bronze bushed sheaves
24 hours	14 days	Blocks with roller bearing sheaves

Lubricant: either sodium or lithium base greases may be used.
 Soda soap base greases are more fibrous and cohesive.
 Lithium soap base greases are particularly applicable where excessive moisture is present.

Inspection and Maintenance

Inspection and Maintenance Schedule/General

Inspection frequency	Item	What to check for	Appropriate Action
Daily	Hook Latch	Missing or off center	Replace immediately
		Permanent deformation or stretching	A clear indication of overload. Take out of service immediately and replace.
	Hooks and Other Fittings	Cracks or other defects	Any suspicion of fractures calls for an immediate investigation and, if necessary, the replacement of the defective part. USAS B 30.5-1968 suggests that hooks should be tested at least once a year by magnafluxing. X-ray or other qualified method. Intermittent tests can be conducted, however, by the readily available, though less accurate, oil stain method. (Immerse hook in lube oil, wipe dry; whitewash surface; inspect for signs of fracture seepage.)
14 days Under Continuous Operating Conditions	Swivels	End Play or Gap of more than 1/16" (1.6 mm) along the Axis	Remove from service immediately.
	Plates	Side plate spread	Indicates overload. Remove for repairs.
		Looseness	Sign that retaining nuts may be backing out. Tighten and re-stake in accord with Nut/Retainer Checklist.
30 days Under Intermittent Operating Conditions	Sheaves	Misalignment, as evidenced by wobble or uneven groove flange wear	Indicates severe bearing wear. Remove from service and forward to factory for repairs estimate.
		Striations or Corrugations in sheave groove	Result of rope wear. If serious, have factory remachine or replace.

6

INFORM A RIGGER – PASS THE WORD

When using a latch to close the throat opening of the hook, care shall be taken that the rigging load is not carried by the latch. Hook latches aid in the retention of loose slings under slack rigging conditions only and are not intended to be anti-fouling devices during lifting. Such fouling is extremely dangerous and shall be avoided by proper rigging and controlled lifting dynamics.

- **Never use a worn-out or damaged crane block.** Avoid structural or mechanical failure.

Each day before use, the crane block and its fasteners and attachments shall be inspected for damage or defects by a competent person designated by the employer. Additional inspections shall be performed during crane block use where service conditions warrant. Damaged or defective crane blocks shall be immediately removed from service. In addition to the daily inspection, a thorough periodic inspection shall be made on a regular basis, to be determined on the basis of (A) frequency of crane block use; (B) severity of service conditions; (C) nature of lifts being made; and (D) experience gained on the service life of crane blocks used in similar circumstances.

Such inspections shall in no event be at intervals greater than once every 12 months.

The following findings shall be cause for crane block removal from service until repaired or replaced;

- Elongated center pin and hook trunnion holes exceeding 5% of original diameter,
- Bent side plates,
- Severe corrosion pitting,
- Corroded hook threads,
- Bent or twisted hook,
- Welding on hook,
- Damaged or dysfunctional hook latch,
- Cracks in sheaves, side plates, cheek weights, center pins, hook trunnion, dead end connections and hook,
- Material loss due to wear exceeding 10% of original section,
- Sheave wobble,
- Deeply corrugated (not imprinted) sheave grooves or,
- Sheave wire rope groove diameter smaller than 2.5% or greater than 10% of the nominal wire diameter,

- Missing or damaged retaining nuts, snap rings, set screws, cotter pins, tie bolts, hook nut cap screws and lock wire or,
- Missing or illegible rating and warning tags.

The following findings shall be cause for crane block removal from service until corrected;

- Loosened tie bolt nuts, center pin round nuts, cheek weight cap screws and hook nut cap screws. Tie bolt nuts to be torqued to 35-40 ft-lb and restaked, all other fasteners wrench tight.
- Lack of sheave and hook bearing lubrication. Continuous operation: lubricate bushings every 8 hours and roller bearings every 24 hours. Intermittent operation: lubricate bushings and bearing every 14 days.

- **Never use a crane block in extreme temperatures.** Sudden failure can occur.

Crane blocks shall not be heated above 180 degrees F (82 °C). Crane block Working Load Limit is valid between 180 degrees F and service temperature given on the identification tag with normal lifting precautions.

Additional lifting precautions are required below the service temperature given on the identification tag because cold temperature begins to affect the crane block material properties.

Lifting above 75% of the Working Load Limit (WLL), at temperatures between the service temperature given on the identification tag and -40 degrees F (-40 °C), must be done at a slow and steady rate to avoid stress spikes common in normal hoisting dynamics.

75% of the WLL must not be exceeded, when lifting in temperatures below -40 degrees F.

- **Never use a crane block in alkaline or acidic conditions.**

Gunnebo Industries Crane Blocks shall not be used in alkaline or acidic conditions. Resulting metal embrittlement and accelerated corrosion can cause sudden failure.

INFORM A RIGGER – PASS THE WORD

Crane Block Warnings and Use Limitations

This document contains warnings and use limitation information applicable to Gunnebo Industries Crane Blocks and is furnished with all Gunnebo Industries shipments. Crane Block distributors and lift system manufacturers must pass on this information in their warnings and use limitation literature where Gunnebo Industries Crane Blocks are involved.

Never use a crane block without training. OSHA regulation

Protect yourself and others

- **NEVER** use a crane block without training.
- **ALWAYS** inform yourself ... Ask your employer for the manufacturer's crane block use limitations.
- **ALWAYS** comply with applicable Country regulations.
- **ALWAYS** know load weight.
- **NEVER** use a crane block without a legible rated load tag.
- **NEVER** overload a crane block.
- **NEVER** ride on a crane block or load.
- **NEVER** use an improperly rigged crane block.
- **NEVER** use a worn – out or damaged crane block.
- **NEVER** use a crane block in extreme temperatures.
- **NEVER** use a crane block in acidic conditions.

requires responsible work practice.

"The employer shall permit only those employees qualified by training or experience to operate equipment or machinery." OSHA 1926.20 (b) (4).

"Employee shall be knowledgeable of all warnings and cautions on the crane block." - OSHA 1910 Subpart N and 1926 Subpart N.

Employee training should include information given in OSHA training literature, ASME B30.10- 2005 Hook Safety Standards, ASME B30.5-2007 Mobile and Locomotive Cranes and Gunnebo Industries DVD of "Recommended Inspection Practices for Johnson Lifting Accessories" and this document.

Always inform yourself. Ask your employer for crane block safe use instruction.

"The employer shall instruct each employee in the recognition and avoidance of unsafe conditions and the regulations applicable to his work environment to control or eliminate any hazards or other exposure to injury." - OSHA 1926.21 (b) (2).

Always comply with applicable Country regulations. Federal and Local regulations govern worksite activity.

Understand all governing laws and safety standards before use of crane blocks. OSHA 1910.180 and 1926.550 regulates product requirements, operating practices, product identification, inspection requirements, and use limitation obligations.

"If a particular standard is specifically applicable to a condition, practice, means, method, operation, or process, it shall prevail over any different general standard...." OSHA 1910.5 (c) (1).

Contact OSHA at 800-321-6742, www.osha.gov and ASME at 800-843-2763, www.asme.org for reference assistance.

Always know load weight. Avoid crane block failure.

The weight of the load shall be within the rated load of the crane block.

Weight of the load to be lifted must be known for determination of proper reeving and rigging of crane block.

- **Never use a crane block without a legible identification**

tag. Crane block tag is required to insure proper block application.

"All hook and ball assemblies and load blocks shall be labeled with their rated capacity and weight." - ASME B30.5-1.7.6.

- **Never overload a crane block.** Understand Working Load Limits. Overload can cause crane block failure or permanent damage.

Maximum crane block Working Load Limit (Rated Load) is valid only when all crane block sheaves are reeved. Partial reeving requires a Maximum Working Load Limit reduction; $WLL_{PR} = WLL_{MAX}$ times the No. of reeved sheaves divided by the maximum No. of sheaves.

- **Never ride on a crane block or load.** Avoid death or injury.

"All employees shall be kept clear of loads about to be lifted and of suspended loads." - OSHA 1926.550 (a) (19).

"No hoisting, lowering, swinging or traveling shall be done while anyone is on the load or hook assembly." - OSHA 1910.180 (h) (3) (v).

The use of a crane block to hoist employees on a personnel platform is prohibited. Except when the erecting, use, and dismantling of conventional means of reaching the worksite, such as a personnel hoist, ladder, stairway, aerial lift, elevating work platform or scaffold, would be more hazardous or is not possible because of structural design or worksite conditions. - OSHA 1926.550 (g) (2).

Follow Crane Operators' Manual for personnel lifting requirements.

Never rig a crane block to a crane or a load improperly. Avoid dropped loads and crane block damage.

Crane block shall not be;

- allowed to "two-block",
- unsymmetrically reeved,
- used with reeving off lead greater than 2.5 degrees,
- used with a single part of line unless expressly permitted,
- used as a wrecking ball,
- used to drag a load,
- subjected to high vibration,
- immersed in water.

Hook load rigging shall be centered in the base (bowl/saddle) of the hook to avoid point loading of the hook and rigging disengagement. (See figure 1a, 1b, & 1c.).

"Quick Reeve" Product Advisory

AVOID BODILY INJURY. Read and understand this safety advisory before attempting to install or remove wire rope from a Gunnebo Industries Model QRJ "Quick Reeve" block.

This advisory is intended for the attention of all "Quick Reeve" Crane Block users and should be forwarded to the field with the product.

This advisory is a **CAUTION** concerning the potential for **BODILY INJURY** resulting from tipping of the "Quick Reeve" Crane Block during crane to block reeving. Crane block tipping can result from uneven ground, reeving action and crane motion.

The Gunnebo Industries "Quick Reeve" Crane Block is stable, when positioned and reeved, in accordance with the following instructions.

Contact the factory at 1-800-331-5460 with any questions or for additional copies of this safety advisory.

INFORM A RIGGER – PASS THE WORD

Overhaul Ball Warnings and Use Limitations

This document contains warnings and use limitation information applicable to Gunnebo Industries Overhaul Ball Assemblies and is furnished with all Gunnebo Industries shipments. Overhaul Ball distributors and lift system manufacturers must pass on this information in their warnings and use limitation literature where Gunnebo Industries Overhaul Ball Assemblies are involved.

Protect yourself and others

- **NEVER** use an overhaul ball without training.
- **ALWAYS** inform yourself ... Ask your employer for the manufacturer's overhaul ball use limitations.
- **ALWAYS** comply with applicable Country regulations.
- **ALWAYS** know load weight.
- **NEVER** use an overhaul ball without a legible rated load tag.
- **NEVER** overload an overhaul ball.
- **NEVER** ride on an overhaul ball or load.
- **NEVER** use an improperly rigged overhaul ball.
- **NEVER** use a worn – out or damaged overhaul ball.
- **NEVER** use an overhaul ball in extreme temperatures.
- **NEVER** use an overhaul ball in acidic conditions.

- **Never use an overhaul ball without training.** OSHA regulation requires responsible work practice.

"The employer shall permit only those employees qualified by training or experience to operate equipment or machinery." - OSHA 1926.20 (b) (4).

"Employee shall be knowledgeable of all warnings and cautions on the overhaul ball." - OSHA 1910 Subpart N and 1926 Subpart N.

Employee training should include information given in OSHA training literature, ASME B30.10-2005 Hook Safety Standards, ASME B30.5-2007 Mobile and Locomotive Cranes and Gunnebo Industries DVD of "Recommended Inspection Practices for Johnson Lifting Accessories" and this document.

- **Always inform yourself.** Ask your employer for overhaul ball safe use instruction.

"The employer shall instruct each employee in the recognition and avoidance of unsafe conditions and the regulations applicable to his work environment to control or eliminate any hazards or other exposure to injury." - OSHA 1926.21 (b) (2).

- **Always comply with applicable Country regulations.** Federal and local regulations govern worksite activity.

Understand all governing laws and safety standards before use of overhaul ball. OSHA 1910.180 and 1926.550 regulates product requirements, operating practices, product identification, inspection requirements, and use limitation obligations.

"If a particular standard is specifically applicable to a condition, practice, means, method, operation or process, it shall prevail over any different general standard..." - OSHA 1910.5 (c) (1).

Contact OSHA at 800-321-6742, www.osha.gov and ASME at 800-843-2763, www.asme.org for reference assistance.

- **Always know load weight.** Avoid overhaul ball failure.

The weight of the load shall be within the rated load of the overhaul ball.

Weight of the load to be lifted must be known for determination of proper rigging of overhaul ball.

- **Never use an overhaul ball without a legible identification tag.** Overhaul ball tag is required to insure proper ball application.

All hook and ball assemblies and load blocks shall be labeled with their rated capacity and weight. - ASME B 30.5-1.7.6.

- **Never overload an overhaul ball.** Understand Working Load Limits. Overload can cause overhaul ball failure or permanent damage.

- **Never ride on an overhaul ball or load.** Avoid death or injury.

"All employees shall be kept clear of loads about to be lifted and of suspended loads." - OSHA 1926.550 (a) (19).

"No hoisting, lowering, swinging or traveling shall be done while anyone is on the load or hook assembly." - OSHA 1910.180 (h) (3) (v).

The use of an overhaul ball to hoist employees on a personnel platform is *prohibited*. Except when the erecting, use, and dismantling of conventional means of reaching the worksite, such as a personnel hoist, ladder, stairway, aerial lift, elevating work platform or scaffold, would be more *hazardous* or is *not possible* because of structural design or worksite conditions.

Follow crane operator's manual for proper personnel lifting requirements.

- **Never rig an overhaul ball to a crane or a load improperly.** Avoid dropped loads and overhaul ball damage.

Overhaul ball shall not be;

- allowed to "two-block",
- used as a wrecking ball,
- used to drag a load,
- subjected to high vibration or
- immersed in water.

Hook load rigging shall be centered in the base (bowl/saddle) of the hook to avoid point loading of the hook and rigging disengagement. (See figure 1a, 1b, & 1c).

When using a latch to close the throat opening of the hook, care shall be taken that the rigging load is not carried by the latch. Hook latches aid in the retention of loose slings under slack rigging conditions only and are not intended to be anti-fouling devices during lifting. Such fouling is extremely dangerous and shall be avoided by proper rigging and controlled lifting dynamics.

INFORM A RIGGER – PASS THE WORD

Figure 1a

Figure 1b

Figure 1c

- **Never use a worn-out or damaged overhaul ball.** Avoid structural or mechanical failure.

Each day before use, the overhaul ball and its fasteners and attachments shall be inspected for damage or defects by a competent person designated by the employer. Additional inspections shall be performed during overhaul ball use where service conditions warrant. Damaged or defective overhaul ball shall be immediately removed from service. In addition to the daily inspection, a thorough periodic inspection shall be made on a regular basis, to be determined on the basis of (A) frequency of overhaul ball use; (B) severity of service conditions; (C) nature of lifts being made; and (D) experience gained on the service life of overhaul ball used in similar circumstances. Such inspections shall in no event be at intervals greater than once every 12 months.

The following findings shall cause overhaul ball removal from service until replaced or repaired;

- Elongated ball pin holes, hook latch pin holes and swivel eye exceeding 5% of original diameter,
- Swivel end play gap exceeding .08". Excessive end play indicates damaged internal set screw, (See Figure 2)
- Bent connector plates,
- Severe corrosion pitting,
- Bent or twisted hook,
- Welding on hook,
- Damaged or dysfunctional hook latch,
- Cracks in connector plates, ball casting, ball pin, hook latch pin, swivel and hook,
- Material loss due to wear exceeding 10% of original section,
- Loose, missing or damaged retaining nuts, cotter pins or swivel set screws or
- Missing or illegible rating and warning tags.

The following findings shall cause overhaul ball removal from service until corrected;

- Lack of swivel bearing lubrication. Continuous operation: Lubricate every 24 hours. Intermittent operation: Lubricate every 14 days.

- **Never use an overhaul ball in extreme temperatures** Sudden failure can occur.

Overhaul ball shall not be heated above 180 degrees F. (82 °C). Overhaul ball Working Load Limit is valid between 180 degrees F and service temperature given on the identification tag with normal lifting precautions.

Additional lifting precautions are required below the service temperature given on the identification tag because cold temperature begins to affect the overhaul ball material properties.

Lifting above 75% of the Working Load Limit (WLL), at temperatures between the service temperature given on the identification tag and -40 degrees F (-40 °C), must be done at a slow and steady rate to avoid stress spikes common in normal hoisting dynamics.

75% of the WLL must not be exceeded, when lifting in temperatures below -40 degrees F (-40 °C).

- **Never use an overhaul ball in alkaline or acidic conditions.**

Overhaul balls shall not be used in alkaline or acidic conditions. Resulting metal embrittlement and accelerated corrosion can cause sudden failure.

FIGURE 2

Wedge Sockets

Gunnebo Industries open wedge sockets combine positive attachment with optimum versatility.

Easy-to-change Gunnebo Industries wedge sockets consist of a normalized and tempered steel body, a steel bar stock pin with cotters, and a ductile iron wedge to specific wire rope size. Together, wedge and body act as a vise which grips the wire rope and locks it in place.

Gunnebo Industries wedge sockets may be used with multiple sizes of wire rope. To switch from an overhaul ball application calling for a 7/8-inch (22 mm) wire rope to a block application calling for a 1-inch (25 mm) rope, it is not necessary to buy a complete wedge socket. A simple change-out of wedges will suffice. Of the 18 models of wedge sockets offered by Gunnebo Industries, all can be adapted to at least two sizes of wire rope. The WS-4 and WS-5, in fact, will adapt to three sizes.

Be sure that the wedge is correct for the wire rope size. Each socket manufactured by Gunnebo Industries has a model number and acceptable rope sizes cast into its body. Each wedge has the rope size and particular socket model it will fit. Wedges are also coded by means of color. Red indicates that the wedge is for the largest size of wire rope stated on its socket. Green indicates that the Wedge is for the smallest size of rope stated on its socket. Blue indicates that the wedge is a rope size of 9/16 (14 mm) inches; black for 7/16 (11 mm) inches.

When using wedge sockets note that two precautions should be taken.

1. Make sure that a sudden jolt or impact does not dislodge a wedge. When installing wire rope, always pre-load the wedge with wire rope in place. Check frequently to re-tighten or re-position as necessary.
2. Make allowance for the crimping effect common with all types of wedge sockets. Experience shows that it will reduce the Safe Working Limit of a line by 20 percent.

Effect of Crimping Action of Wedge Socket on Safe Working Limits of Wire Rope*

Wire Rope O.D. (Inches)	Weight Per Foot (pounds)	Line S.W.L. Without Wedge Socket (short tons)	Line S.W.L. With Wedge Socket (short tons)
3/8" (10 mm)	26 (12 kg)	1.6	1.3
1/2" (13 mm)	46 (21 kg)	2.9	2.3
9/16" (14 mm)	59 (27 kg)	3.6	2.9
5/8" (16 mm)	72 (33 kg)	4.5	3.6
3/4" (19 mm)	1.04 (0.47 kg)	6.4	5.1
7/8" (22 mm)	1.42 (0.64 kg)	8.7	7.0
1" (26 mm)	1.85 (0.84 kg)	11.2	9.0
1-1/8" (32 mm)	2.34 (1.1 kg)	14.1	11.3

INFORM A RIGGER – PASS THE WORD

Snatch Block Warnings and Use Limitations

This document contains warnings and use limitation information applicable to Gunnebo Industries Snatch Blocks and is furnished with all Gunnebo Industries shipments. Component distributors and lift system manufacturers must pass on this information in their warnings and use limitation literature where Gunnebo Industries Snatch Blocks are involved.

Protect yourself and others

- **NEVER** use a Snatch Block without training.
- **ALWAYS** inform yourself ... Ask your employer for the Snatch Block safe use instructions.
- **ALWAYS** comply with applicable Federal and local regulations.
- **ALWAYS** know applied lift system load.
- **NEVER** use a Snatch Block without a legible product identifier.
- **NEVER** overload a Snatch Block.
- **NEVER** ride on a Snatch Block or load.
- **NEVER** rig a Snatch Block improperly.
- **NEVER** use a worn – out or damaged Snatch Block.
- **NEVER** use a Snatch Block in extreme temperatures.
- **NEVER** use a Snatch Block in alkaline acidic conditions.

- **Never use a Snatch Block without training.** OSHA regulation requires responsible work practice.

“The employer shall permit only those employees qualified by training or experience to operate equipment or machinery” – OSHA 1926.20 (b) (4).

Employee training should include information given in OSHA training literature, ASME B30.26 - 2010 “Rigging Hardware” standard, lift system manufacturer’s literature, Gunnebo Industries DVD of “Recommended Inspection Practices for Johnson Lifting Accessories”, and this document.

- **Always inform yourself.** Ask your employer for Snatch Block safe use instruction.

The employer shall instruct each employee in the recognition and avoidance of unsafe conditions and the regulations applicable to his work environment to control or eliminate any hazards or other exposure to illness or injury” – OSHA 1926.21 (b) (2).

- **Always comply with applicable Federal and local regulations.** Federal and local regulations govern worksite activity.

Understand all governing laws and safety standards before use of Snatch Blocks in lift systems.

“If a particular standard is specifically applicable to a condition, practice, means, method, operation, or process, it shall prevail over any different general standard...” — OSHA 1910.5 (c) (1).

Contact OSHA at (800) 321-6742, or www.OSHA.gov and ASME at (800) 843-2763, or www.ASME.org for reference assistance.

- **Always know applied lift system load.** Avoid improper Snatch Block selection.

Lift system load (LSL) applied to the snatch block fitting is

based upon line pull (LP) and load factor (LF) for a given lift angle (LA).

Maximum LSL applied to snatch block fitting must be known for proper snatch block selection.

LSL is calculated by the following formula:

$LSL = (LP) * (LF) / LA$ See illustration and table in Figure No. 1. LSL must be calculated for each snatch block in the lift system.

Snatch Block Working Load Limit (WLL) with appropriate design factor shall be equal to or greater than the corresponding maximum LSL.

- **Never use a Snatch Block without a legible product identifier.** Product Identification is required to insure proper application.

Snatch Blocks have a product identifier giving WLL, design factor, wire rope range, and important user warnings. The information is required for confirmation of proper application prior to use.

WARNING:

Failure to read, understand and comply with the instructions, working load limits and specifications in this publication may result in serious injury or damage to property.

A solution provider since 1764

With more than 80 years experience in the sheaves business and a 250-year legacy in the lifting and rigging industry, Gunnebo Industries has an in-depth knowledge of the industry, and an extensive product offering to all markets and applications.

- At Gunnebo Industries, we develop and manufacture sheaves for all purposes. It is our commitment to always [provide optimized solutions](#) for our customers' specific needs. Regardless if it's time, price, weight, volume or something else, we will supply the best possible solution based on application and need.
- With production facilities in USA and Europe, [we serve customers on a global scale](#), always close, for the best possible support.
- We have one of the [world's largest engineering](#) staffs within our field, in order to be able to offer [flexible design, quick delivery and long-lasting high quality](#) products. The combination of our long heritage of technical knowhow and innovation, together with an extensive engineering team, makes our offering unique.
- We offer our Johnson sheaves [from 76 mm, up to 7.5 m and 20 000 kg](#). We have standard sheaves as well as customized solutions. We offer sheaves in all geographies, for every application. Our sheaves have a proven track record and have been in use in the industry for decades.

As experts within the sheaves business, we support our customers to find the best solution for their specific need, every day, everywhere.

Johnson Sheaves by Gunnebo Industries

Solutions for every application and all conditions

Johnson sheaves are highly trusted, preferred and utilized by many crane and rig manufacturers around the world. Our sheaves are designed to optimize performance and quality, providing a number of advantages to our customers;

Superior durability

- Made of high-strength materials to handle tough applications
- Optimized material specification enables the best possible weight, sheave performance and service life

Optimal design

- Superior stress flow to assure high resistance against fatigue
- Optimized weight to fit project needs
- Adjustable designs to provide capacity in extreme load case
- Design to optimize product functionality

Reliable delivery

- Flexibility in production to shorten lead-times
- Custom sheaves can be made in small and large quantities with virtually no tooling cost
- We can also build to your forecast to maximize the efficiency of your production schedule and shorten lead time

Longer life

- Deep hardening of the sheave groove extends life of the rope and the sheave
- Broad range of hardnesses to accommodate wire and sheave properties for maximum service life
- Our unique concurrent hardening can be provided for forged sheaves 0.6 m - 1.8 m which provides the additional benefit of hardened groove walls

World-class engineering team

- Engineering team with comprehensive know-how of the rules and regulations for most class societies - DNV GL, ABS, API, CCS, BV, LRS, Machine Directive
- Capacity to provide solutions for extraordinary project specifications, up to 20 000 kg and 7.5 meters
- Specialists in delivering large sheave diameters with FEM analysis. Design reports available upon request

Applications

Gunnebo Industries offers a wide range of sheaves, for all applications. Below are some of the most common applications where we serve our customers with different sheaves. Sheaves can be manufactured for ForgeFab, cast ductile iron, cast steel or welded assemblies depending on the size, quantity, delivery and application requirements.

Offshore crane sheaves – Specially designed to handle heavy loads and large fleet angles. Can be designed to meet the requirements of API 2C, ABS, DNV, LR, BV and CCS. Sizes up to 7.5 m in diameter available.

Drilling and well servicing sheaves – Manufactured to API specification 8C to withstand the high intensity application on drilling and well servicing rigs. These sheaves are used in crown assemblies, drilling/traveling blocks and tubing blocks. These are available from 0.5 m - 2 m in diameter.

Riser tensioning and motion compensation sheaves – Fully optimized for the high load and long life requirements of an offshore environment. Available up to 2.7 m outer diameter.

Launch and recovery systems (LARS) sheaves – Optimized weight/capacity ratio and come in standard outer diameter size of 1580 mm, or as customized sizes. These are manufactured with a standard groove size with other sizes available upon request.

Mobile crane sheaves – Used in boom points, boom extensions and hook blocks. Available in variety of sizes from 0.25 m to 1.2 m in diameter and can be grooved for up to 38 mm wire rope ideally suited for heavy lifting.

Overhead crane sheaves - Used both in upper sheave nests and hook blocks and are designed for continuous heavy use. Sizes available from 127 mm up to 1.2 m in diameter.

Mooring sheaves - Designed to be used in an offshore environment for towing, pulling and anchoring of ships. Available in 457 mm to 1.5 m in diameters.

Deflector sheaves - Used in a fairleader block to accommodate the directional change of the wire rope. Available in 76 mm up to 3 m in diameter.

General industrial sheaves – Built for a high variety of applications where wire rope is used to lift or pull such as tilting and lifting of flare stacks, roll on and roll off truck bodies, tower erection and anywhere the change of direction of wire rope is required.

For information about our forged Johnson wire rope sheaves, please contact your Gunnebo Industries representative.

High quality sheaves - flexible design

All sheaves are designed and manufactured according to customer requirements and applicable class regulations. The sheaves can be supplied with bearings, bushings or as plain bore. If required, the groove for the steel wire rope can be hardened up to a hardness of 550 HB. Sheaves can be compliant with the following classes: DNV GL, ABS, Lloyd's Register, BV, CCS, API.

Forged sheaves

Our forged sheaves are field proven and have a short manufacturing time. Forging provides good material flow in the groove providing longer service life for both sheave and wire rope.

- Size: 0.25 - 1.8 m
- Ideal for any application, especially high use applications
- 2 - 6 weeks manufacturing time. Suitable for any quantity
- Steel construction sustains low temperatures

Cast sheaves, iron

We offer cast sheaves in iron, with a flexible design in any size. Cast design provides a smooth stress flow giving long durability.

- Size: 0.2 - 7.5 m
- Flexible design, casting provides smoother stress flow, lower weight and can be optimized to specific applications
- 6 - 14 weeks manufacturing time. Minimum order might apply

Cast sheaves, steel

Our cast sheaves, made in steel, enables a flexible design and are available in any size. These have similar advantages as to our casted sheaves in iron.

- Size: 0.2 - 7.5 m
- Flexible design, no welds means smoother stress flow
- 6 - 14 weeks manufacturing time. Minimum order might apply
- Sustains low temperatures

Machined sheaves, steel

Our machined sheaves, in steel, are field proven and have a fast delivery time. They are available in any size and can endure low temperature.

- Size: < 2 m
- Manufacturing lead times from 2 week. Suitable for small quantities
- Sustains low temperatures

Optional features:

- Custom design to customer shaft, bearing mounting, hub, sheave O.D. or wire rope size requirement
- Modifications as required to API and other applicable industry standards
- Electroplating, inorganic zinc compound and other corrosion resistant coatings available
- Hub-located grease fittings
- AISE No. 6 specifications
- Cold weather properties
- Special shaft, furnished for any sheave listed

ForgeFab® sheaves

Our ForgeFab sheaves have been the first choice for many crane and rig manufacturers for decades. Our unique production process supports quick deliveries without compromising on the high quality of our sheaves.

Unique production process for a long product life

Each ForgeFab sheave begins as precision disc cut from superior chemistry alloy steel plate

The steel disc is heated to forging temperature and its edge rotated against a system of staged rollers to forge the sheave rim and wire rope groove

A precisely machined hub is arc welded to the forged disc. A variety of welding techniques is used, including: fillet, submerged arc, partial penetration and full penetration, depending on the application

The result: A precision built ForgeFab sheave, resistant to wear giving a long product life span as well as decreased wear on the wire rope

ForgeFab concurrent hardened sheaves

Concurrent hardening up to 440 HB

Strengthens groove as well as entire flange and penetrates deeply into webbing to handle the most difficult applications. (0.6 m to 2 m diameter)

ForgeFab flame hardened sheaves

Flame hardened to minimum 325 HB

Toughens the groove for long life in most applications. (0.4 m to 0.6 m in diameter)

Information needed for quotation

Dimensional information

- Wire line diameter
- Sheave outside diameter (A or OD)
- Bore size, if plain or finished bore (E)
- Hub width (G)
- Hub outside diameter (T)
- Shaft size with bearing (E)
- Rim width (C)
- Tread diameter (TD)

Bearing options

- Finish/plain bore
- Bronzed bushing
- Roller bearing
- Tapered roller bearing
- Ball bearing
- Full complement cylindrical roller bearing

A full range of standard bronze bushing and roller bearing models is also available, as well as custom sizes.

Type of application

- Description
- Line load
- Line speed
- Degree of wrap
- Fleet angle
- Weight restrictions
- Pitch Diameter (PD)

Are there other requirements?

- Flame hardened groove
- Hardness level
- Paint or finish requirements
- DVR (Design Verification Review) by a 3rd party
- Third party inspection/approval

Tapered roller bearing sheaves

Rim width (not shown) allows for adequate running clearance.

To order, please specify; nominal sheave O.D., model number and wire rope size.

Wire Wrap:	180° contact around sheave.
Bearing:	Tapered Roller Bearing.
Surface Coating:	Standard Enamel with or 2 or 3 coat marine system available upon request.
Hardening of Wire Groove:	Flame hardened to a minimum 35 Rc. Concurrent hardening upon request.
Certificate:	Certification according to ABS, API-8C, BV, CCS, DNVGL or Lloyds on request.

Material F.F. = ForgeFab

1.4 m and larger diameters available on request.

Sheaves with PD 18x steel wire rope diameter

These sheaves have a universal design for use onshore, offshore and subsea in adverse service conditions.

Wire Wrap:	180° contact around sheave.
Bearing:	Glide bearing or double row cylindrical roller bearing.
Surface Coating:	NORSOK M-501 System No. 1 with topcoat colour RAL 1003 (Signal Yellow) with option for System No. 7 or other topcoat colour on request.
Hardening of Wire Groove:	Induction hardening on request up to 550 Brinell Hardness.
Certificate:	Manufacturer work certificate acc. to DNV GL, Lloyds, ABS, BV or CCS.
Regulations:	European Machinery Directive.

Machined or cast ductile iron depending on quantity.

Sheaves with PD 24x steel wire rope diameter

These sheaves have a universal design for use onshore, offshore and subsea in adverse service conditions. This size is also suited for systems with heave compensation.

Wire Wrap:	180° contact around sheave.
Bearing:	Glide bearing or double row cylindrical roller bearing.
Surface Coating:	NORSOK M-501 System No. 1 with topcoat colour RAL 1003 (Signal Yellow) with option for System No. 7 or other topcoat colour on request.
Hardening of Wire Groove:	Induction hardening on request up to 550 Brinell Hardness.
Certificate:	Manufacturer work certificate acc. to DNV GL, Lloyds, ABS, BV or CCS.
Regulations:	European Machinery Directive.

WARNING:
Failure to read, understand and comply with the instructions, working load limits and specifications in this publication could result in serious injury or damage to property.

Chain Tensioner GT

The chain tensioner from Gunnebo Industries, GT, is integral in one set. It is made of high strength Grade 10 material and the ratchet handle contributes to a fast and ergonomic lashing procedure. The GT is fitted with safety pins to prevent unintended release of the threaded end fittings.

GT has 25% increased Lashing Capacity (LC) compared to Grade 8 lashings and high Standard Tension force (STF) thanks to the unique ratchet handle .

Our chain tensioner is designed to be compatible with the GrabiQ product range, enabling the choice of robust end-hooks with latches. Can also be provided as approved for lifting purposes.

Unique benefits with our Chain Tensioner

Short handle

- Fully protected ratched mechanism with 8 steps per 90 degree pull, enabling use in very narrow spaces.
- Easy to change direction.
- The rubber handle decreases the risk of slipping and is convenient in cold climates.

Open design

- For easier and faster cleaning and lubrication.
- Allows dirt to fall through instead of building up.
- Two drain holes in the body prevent water residue.

Trapezoidal thread

- Makes the thread less sensitive to dirt and particles.
- Low-friction treated for trouble free operation.
- Makes lashing faster.
- Safety pins prevents unintended unwinding.

Chain Lashing System

Gunnebo Industries offers a complete chain lashing system approved according to EN 12195-3. The system has been developed with focus on the user's needs and working environment, and with safety as highest priority. The unique Midgrab chain shortener saves valuable time and effort, and is a natural part of an efficient and effective chain lashing system.

GT Chain Lashing System offers 25% increased Lashing Capacity (LC) compared to Grade 8 lashings.

End fitting

Lashing hooks in grade 10, such as the EGKN Sling Hook with a heavy duty latch or the GBK Griplatch Safety Hook. Marked with positive indication of the manufacturer, product designation, size, batch number and grade.

ID-tag

The ID-tag must state the lashing standard, capacity, tension force, traceability and name of manufacturer. It must also clearly say that the set is for lashing only, lifting is prohibited

Shortening function

The Midgrab offers instant mounting on any part of the chain, with the ability to shorten the chain in either direction. It is designed to prevent the chain from disengaging. Marked with positive indication of the manufacturer, product designation, size, batch number and grade.

Chain

Gunnebo Industries high tensile short link chain, grade 10 = 1000 N/mm² type KLA-10-10, LC = 80 kN. Surface treatment: Powder coated. ID-marking of the chain: 10G

Chain Tensioner GT

Art. no	Model	Lashing capacity (kN)	STF (daN)	L = Min. length (mm)	L = Max. length (mm)	Weight kg
