

Operating instructions for attachment swivels "THEIPA"- Point (TP), "THEIPA"-Point-S (TP-S), "THEIPA"-Point-F (TP-F)

General principles regarding the utilisation of lifting accessories and their components:

The operating instructions are to be stored together with the certificate and the EC declaration of conformity.

The falling of loads, caused by the failure and / or incorrect utilisation and handling of lifting equipment or its individual parts constitutes a direct risk to the life or health of the people who are present in the danger zone of lifting processes.

These operating instructions contain information with regard to the safe utilisation and handling of the lifting accessories and their components. Before using the lifting equipment, the assigned persons are to be briefed with regard to handling and utilisation by a qualified person.

The following principles apply:

- The Working Load Limit (WLL) (see label) of the lifting equipment must correspond to the load. The lifting equipment may not be used if the label is missing or is illegible.
- No danger areas (e.g. crushing points, cutting points, trapping or impact points) may occur that may hinder or endanger the person carrying out the slinging process and / or the transport.
- The base material and the constructive design of the load must be able to hold the applied forces without deformation.
- Stress that leads to a non-uniform load distribution, e.g. which is caused as a result of an off-centre introduction of force must be taken into account when selecting the lifting accessories and their components.
- In the event that extreme stress or strong dynamic strain (shock influences) may occur, this must be taken into account when selecting the lifting equipment and the Working Load Limit (WLL).
- The lifting equipment may not be used for the transportation of persons. No persons are ever permitted to remain present in the danger area of a suspended load.
- The lifting equipment may not come into contact with acids and other aggressive agents. Attention must also be paid to the fact that acid fumes may occur in certain production processes.
- Never make unauthorised amendments to the lifting equipment (e.g. grinding, welding, bending, and attachment of parts)!
- The lifting equipment may not be exposed to any forbidden manipulation of temperature.
- Only original spare parts may be used.
- The relevant additional regulations must be observed when transporting hazardous substances.
- Lifting accessories and their components must be stored in such a manner that they are protected against being damaged and do not cause any danger.
- If damaged, the lifting equipment must be immediately taken out of circulation and has to undergo maintenance work.
- When ready to be discarded, lifting equipment is to be correctly disposed of. Attention: Any substances present that are hazardous to the environment (e.g. greases and oils) are to be disposed of separately.

Inspection and maintenance:

On a regular basis before being used, lifting equipment is to be closely inspected with regard to correct utilisation and faultless condition (e.g. screw fit, absence of strong corrosion and deformation, etc.), for example by the person carrying out the slinging process. Defective lifting equipment may not be used. It has to be tested at least once a year by a qualified person whilst taking the relevant standards and trade association regulations (e.g. DGUV 100-500) into account. JDT recommends a test that the lifting equipment is free of cracks every three years. The test should be done by a qualified person using a proper testing device. The user must observe the results of the risk assessment in accordance with the occupational safety directives. The re-testing period is shortened in the event that the products are exposed to critical operating conditions. Inspection records are to be kept.

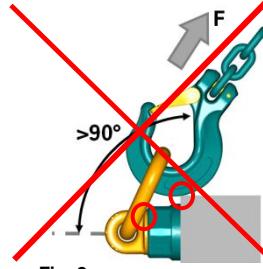

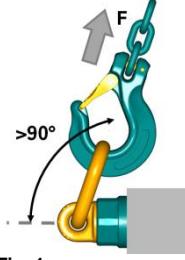

The testing coefficient (EC-Machinery Directive 2006/42/EC point 4.4.1) is defined according to the respective standards and corresponds to 2.5.

Attention: In the event of violation, the operating permission will become void.

Wear measurement concerning withdrawal from service:

Grade 10 THEIPA Point

A gap becomes visible, max. the thickness of the WLL table
 0.5 mm

Utilisation

The quantity and arrangement of the attachment points on the load must be selected so that the load can be carried safely and that it cannot unexpectedly change its position during transport. The chain link of the attachment swivel must be correctly adjusted in the direction of force and it must be freely movable. The use of the swivel in the direction of force application $>90^\circ$ (see Fig. 1) is allowed under the condition that the swivel link and the attached lifting equipment are not supported neither at the load nor on the swivel parts itself (Fig. 2). The Working Load Limit when using at $>90^\circ$ is equal to the Working Load Limit at 90° (see Table 1) providing that symmetrical load distribution is present.

Theipa Points are not suitable for permanent turning operations under load. By the use in turning operations at 90° and full load the excessive wear and accelerated failure must be considered.

General assembly instructions

The lifting swivels must be easily recognisable on the load (e.g. by means of colour marking). The attachment swivels are to be positioned on the load in such a manner that a flat bearing surface is large enough to carry the applied forces. At the very least, this bearing surface must correspond to the complete diameter (b) of the used attachment swivel body (respectively larger when dealing with the weldable attachment swivels). The thread hole must be perpendicular to the bearing surface. The thread hole must be countersunk.

The following applies in principle for **attachment swivels to bolt-on**:

Inspect visually the screw connection paying particular attention to screw size, thread size and screw-in length. Special threads (not listed in catalog) are additionally labelled with a thread marking on the rear side of the swivel body. When dealing with blind holes, the thread depth on the load must be at least 1.1 times of the screw-in length (e). We recommend the following as the minimum screw-in lengths (e):

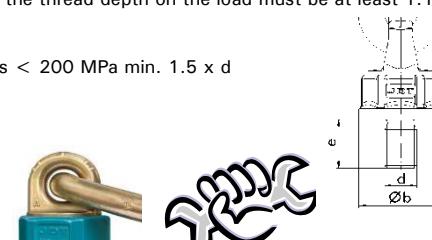

in steel	1	x d
in cast iron	1.25	x d, in cast iron with strengths < 200 MPa min. 1.5 x d
in aluminium	2,5	x d
in aluminium-magnesium alloys	2	x d

(whereby d = thread size, e.g. when M 24 d = 24 mm)

For TP-F, crack-tested screws of strength class 10.9 are to be used.

In the event that TPs are secured with screw nuts, these nuts must correspond to strength class 10 and be crack-tested.

Tighten by hand with a spanner until flush with the bearing surface, e.g. open-ended wrench according to DIN 895 / DIN 894, in the event of a one-off transport procedure. Should the attachment swivel remain in the load on a permanent basis or should it be used to rotate and turn loads, the tightening is to be carried out with a higher tightening torque in accordance with the following Table 1:

Using an open-ended wrench, all Theipa Points (TP, TP-F) must at least be hand-tight !

When dealing with weldable sling points (TP-S), the separate welding information's are to be observed.

Working load limit and temperature use

The attachment swivels are labelled with the respective working load limit and are listed below in the technical data sheet to the respective nominal size in tabular and graphic form. These working load limits may not be exceeded. In case of an asymmetrical load distribution, the working load limit applicable to the 2- to 4-leg sling types is the same as for 1-leg sling type with an inclination angle of 90°. This corresponds to the working load limit marking on the attachment point.

Table 1

Kind of attachment:

- 1 piece at 0°: F upwards
- 1 piece at 90°: F upwards
- 2 pieces at 0°: F upwards
- 2 pieces at 90°: F upwards

Marking:

Marking	[t]	[t]	[t]	[t]	[t]	[t]	[t]
TP-S 2.5	5	2.5	10	5	3.55	2.5	5.3
TP-S 4	8	4	16	8	5.6	4	8.5
TP-S 6.7	12	6.7	24	13.4	9.5	6.7	14
TP-S 10	15	10	30	20	14	10	21.2
TP-S 17	25	17	50	34	23.5	17	35
TP-S 28	32,5	28	65	56	39	28	58

After use by the temperatures above 200°C, the working load limit must be permanently reduced for further usage according to the following table 2. An accelerated wear in the ball bearings is also possible in this case and must be monitored by the user.

Table 2

Working temperature in °C	WLL* in %	* The working temperature of the TP-F can be further restricted as a result of the used screw, the screw supplier must be questioned with regard to this matter. In the event that the TP is secured by a screw nut, the working temperatures can also be further restricted.	
minus 40°C - plus 200°C	100		
plus 200°C - plus 300°C	90		
plus 300°C - plus 400°C	75		
above 400°C	not allowed		

Translation of the original operating instruction.
In case of doubts or misunderstanding, the German version of the document is decisive.

J. D. Theile GmbH & Co. KG, Postfach 18 29, D-58213 Schwerte

erklärt, daß das (die) umseitig bezeichnete(n) Anschlagmittel in der von uns in Verkehr gebrachten Ausführung bei bestimmungsgemäßer Benutzung mit den grundlegenden Sicherheits- und Gesundheitsanforderungen übereinstimmen.

declares that sling gear, listed overleaf, conform in its marketed design with the requisite basic safety and health requirement, provided they are used in accordance with their intended purpose.

déclare que le matériel de levage décrit au verso et employé conformément aux prescriptions, dans l'exécution mise en circulation par nos soins, est conforme aux exigences fondamentales de sécurité et de santé.

verklaart dat de op achterzijde aangegeven aanslagmiddelen in de door ons in het verkeer gebrachte uitvoering bij doelmatig gebruik met de principiële eisen omtrent veiligheid en gezonderheid overeenstemmen.

declara que el/(los) dispositivo(s) de suspensión mencionado(s) al dorso en la forma lanzada al mercado concuerdan con los requerimientos básicos impuestos a la seguridad y a la salud bajo la condición de una aplicación de acuerdo con los fines previstos.

dichiara che il(i) dispositivo(i) di arresto definito(i) a tergo, nel modello da noi distribuito, se usato(i) nel modo dovuto risponde (rispondono) ai requisiti basilari di sicurezza e sanità.

valtuutamana vakuuttaa, että käänöpuolella mainittu kiinnitysväline/tut myyntiin tuomassamme moudossa ja sitä/niiä asianmukaisesti käytettynä ovat perustavina laatuvaatimusten turvallisuus- ja terveysvaatimusten kanssa yhdenmukaisia.

erklærer, at det (de) omstående anslagsmidel (-midler) i den udførelse, som vi har givet den ud, ved bestemmelsens benyttelse stemmer overens med de grundlæggende sikkerheds- og sundhedskrav.

att det (de) på omstående sida uppförda anslagmedlet (-medlen) i det av oss sålda utförandet vid ändamålsenlig sanvändning överensstämmer med de grundläggande kraven beträffande säkerhet och hälsa.
